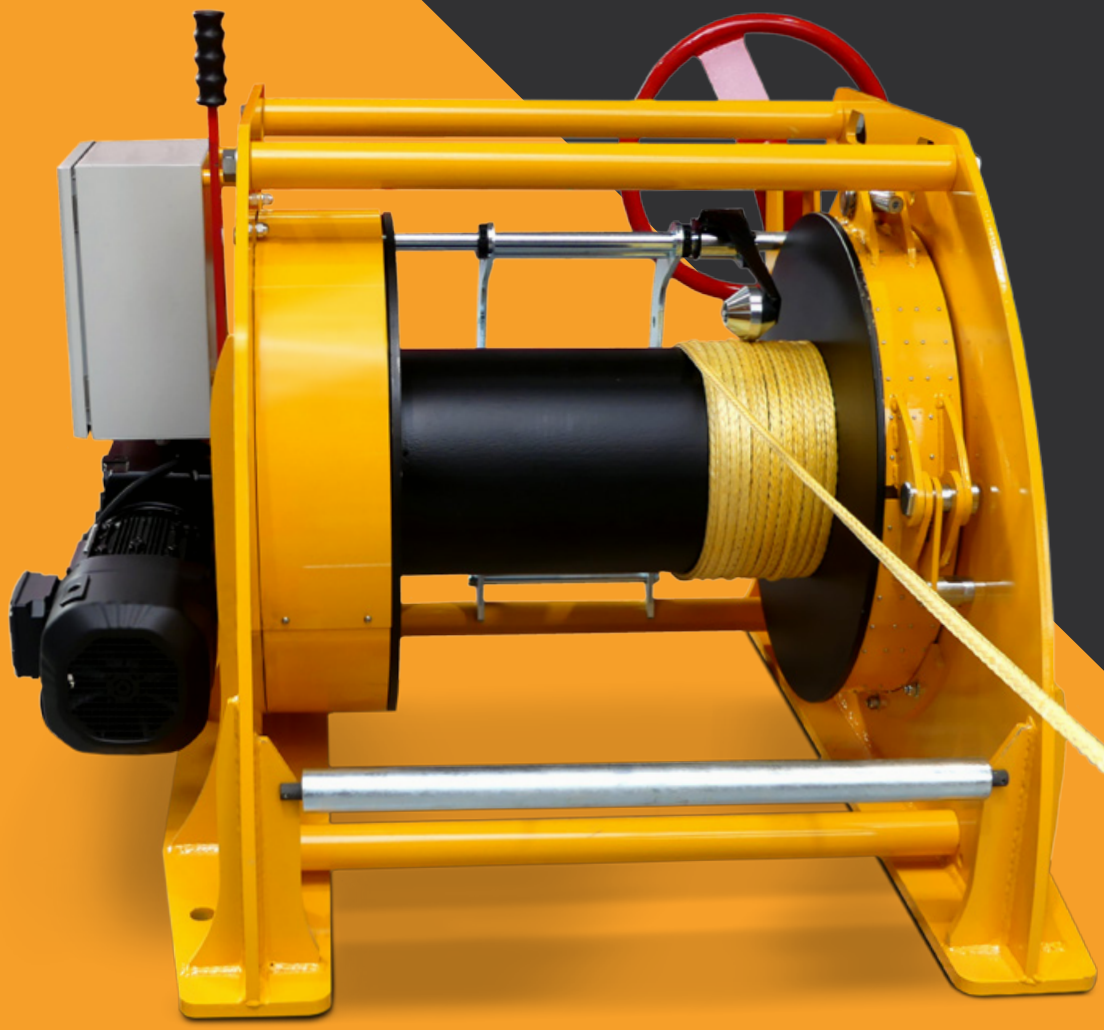
CATALOG 2021

WINCHES - Lifting and pulling solutions

MADE IN FRANCE



HUCHEZ

huchez.com

WELCOME
to an industrial world of Quality

The 2021 edition of our catalogue is published amidst an era of unprecedented events.

Ideas are emerging today about tomorrow's world, making us think about new economic models that maintain quality whilst being more ecological and sustainable.

For Huchez, we continue our commitment to strengthen the closest supply sources for design and manufacture whilst maintaining quality products that provide longevity of use and provide the best in user safety :

· **R&D quality**, which designs and develops the products and solutions to comply with market needs and anticipate their evolution.

· **Quality of the product,** of which components and manufacturing process have made our brand reputation for more than 60 years.

· **Quality of service** founded on the commitment of our employees and partners who will accompany you throughout our relationship.

This edition highlights our new ranges of winches adapted to current uses and standards.

You will discover products that meet the needs of professionals in a wide variety of trades and industries.

Finally, this catalogue is also the start point for custom-made solutions with Huchez Engineering: It offers winch solutions from the most simple to the most specific and complex uses.

Thank you for your trust and confidence.

Antoine Huchez

President

NATO agreement F 7480

SUMMARY

HISTORIC WINCHES MANUFACTURER

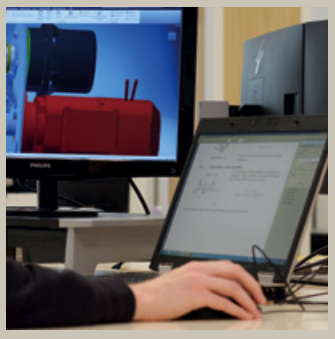
Since 1950, HUCHEZ designs, develops and manufactures manual, electric, hydraulic, petrol or diesel winches for lifting or pulling applications.

It is our tradition and our conviction to exclusively design and manufacture our products with the highest quality level, offering the warranty, to our customers and users, of reliability and long operating time.

In our workshop based in France, the operational excellence is daily implemented by all our employees and throughout manufacturing cycle of our products.

MADE IN FRANCE

DESIGNING



MACHINING

ASSEMBLYING

TESTING

RECENT IMPORTANT DATES

2000

Construction of the machining workshop: 1600 m² used to manufacture parts needed in all HUCHEZ winches.

2001

Since 2001, HUCHEZ is certified for its quality management system according to the reference ISO 9001.

2016

HUCHEZ launches its new website.

2019

All of Huchez teams are located on the same site located 4 rue Michel Hammid in Ferrières.

KEY FIGURES

Industrial site of 4380 m².

53 employees.

Turnover of 9 millions €.

45% of its turnover made with export in more than 55 countries worldwide.

HUCHEZ is a member of Evolis, of FIM, of UIMM and of Réseau Entreprendre.

EVOLIS is the result of the merge of two professional organizations CISMA and PROFLUID in July 2019.

THE INNOVATION: main pillar of our business culture

Our innovation strategy enables us to anticipate new market requests and reinforce our growth dynamics.

Our constant innovation policy has been rewarded by the INPI Trophy for Innovation 2013 for Picardy (Category "Patent and Trademark Trophy").

The perfect knowledge of the various industries combined with the expertise of mechanics and automation enable Huchez Engineering to answer the most complex issues by offering custom-made solutions to the customers and end user's needs.

PEOPLE at the heart of our customer relationship

Our commercial policy goes beyond the simple customer-supplier relationship.

Every day, our sales team is attentive to you and your customers' needs in order to reach their expectations and assist them in their development.

We offer technical solutions in total compliance with the regulations in force.

The values that drives us, have established a climate of trust and loyalty with all our customers, with all of you.

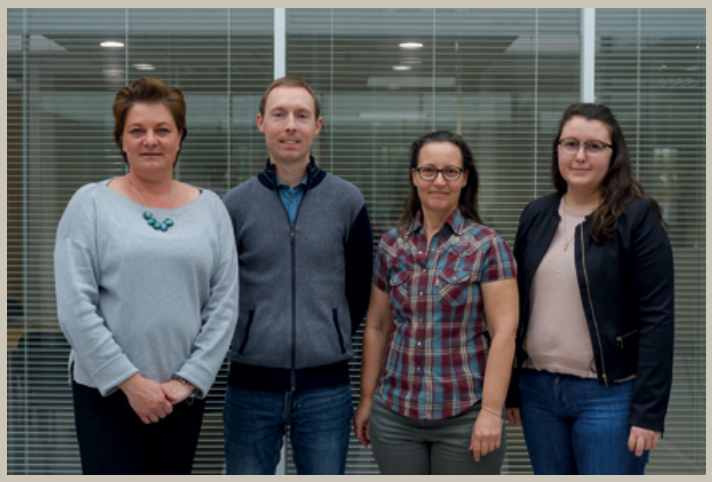
- Customer Support
- Professionalism
- Human Relations

Our ambition is simple:

To be a key partner offering reliable, sustainable, tailor-made, innovative, competitive, and added-value solutions.

SPECIALIST ADVICE

France Sales team.



Export Sales team.

Our teams will give you technical advice and guide you to define the most adequate equipment for your project.

Our teams are constantly receiving training to meet the requirements of the new regulations concerning safe lifting and to help you in this complex area.

You will find all our products and their user manuals on **huchez.com**

PERSONNEL LIFTING

Gantry crane holding a nacelle used during the maintenance of a rotating laminator in which jet engine crowns are made.

Lifting personnel requires specific skills and equipment in order to guarantee the safety of those performing the work.

Two large manufacturers have therefore called **on the expertise and knowledge** of our **HUCHEZ Engineering** department, which has specialised in **designing and manufacturing tailored lifting solutions** since 2000.

Technical features

- Gantry crane with double winch (one for lifting and one anti-fall), one nacelle, one retractable gangway, different options supplied: Radio control, maintenance lifting bar for the installation, etc.
- Lifting speed: 5 m/min.
- Max. working depth: 8 m.
- Useful load : Max. 240 kg (2 pers. with their tools).
- Equipment approved by certifying agency.

GMIP 140, Well Inspection Mobile Crane, used to lower engineers responsible for geological sampling into exploratory wells for mining.

- The assembly consists of a trailer, a main winch, a safety follow-up winch, an ergonomic seat (with harness, fall protection, radio control, lamps, tablet support, axe, etc.) and a petrol-powered generator.
- Average lifting speed: 15 m/min (on adjustable speed drive).
- Max. stroke: 115 m.
- Max. useful load: 140 kg (1 person, tools and samples included).
- Maximum load when moving: 750 kg.

ATEX EXPLOSION PROOF WINCHES

The ATEX 94/9/CE directive is applied to apparatuses (electrical, mechanical, hydraulic, etc.) intended for use in explosive atmospheres (AT-EX), in other words one that, given the local and operational conditions, is liable to become explosive due to the presence of a mixture of inflammable gases, vapours, mists or powers with air under the atmospheric conditions.

According to requirements, our winches or some of their components can meet these standards and are tailored to meet the specific requirements of hazardous environments such as those found in the chemical and petrochemical sectors, as well as those in nuclear power stations, etc.

Lifting winch with ATEX components (electrical unit, upper and lower limit switch, motor, reduction gear).

ATEX lifting winch used on an oil platform.

Technical features

- Stainless steel structure and rods.
- Capacity on the top layer: 1500 kg.
- Lifting speed on the top layer: 4.3 m/min.
- Rope capacity: 120 m, 12 mm dia.
- Equipment for zone 2 gas (category 3).
- Capacity on the top layer: 2000 kg.
- Lifting speed on the top layer: 5.5 m/min.
- Rope capacity: 60 m, 12 mm dia.

INNOVATIVE SOLUTIONS

Specific solution developed for a company belonging to a French food industry group for rapidly loading and unloading railway carriages that **transport bottles used in the production of natural mineral water**. This task was previously carried out manually.

HUCHEZ Engineering also provides innovative solutions in all sectors of activity.

Technical features

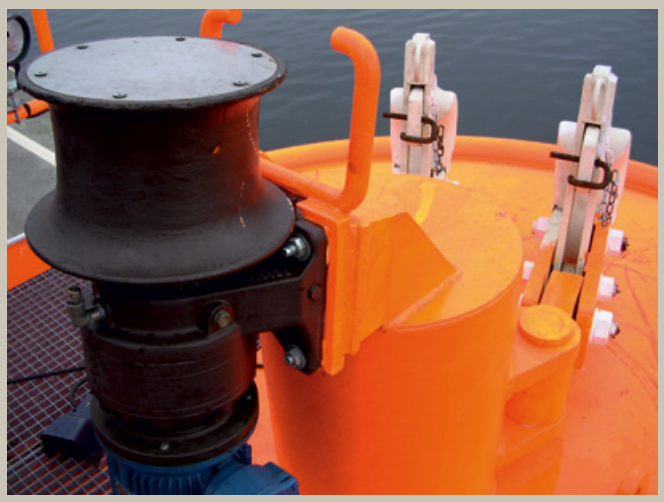
- Arm system on the platforms between two loading tracks. Each winch positioned between two carriages.
- The handlers are controlled by the same radio control both for winding and unwinding the rope.
  Load: 150 daN.
- Speed: 25 m/min (45 m/min for rapid emptying).
- Textile rope – 28 m, 5 mm dia. – with protection handle, sleeve and hook.
- These winches are also fitted with a deflector and rope holding pressure rollers.

- Winch installed on the foredeck of the vessel and used to recover the hull cleaning robot.
- Capacity : 250 kg.
- Adjustable speed : from 2.6 to 26 m/min.
- Rope capacity: 300 m, 5 mm dia.
- Motor : 1.1 kW – IP66 protection and marine paint.

CAPSTANS

On request, HUCHEZ designs and manufactures reliable and high-performance horizontal and vertical capstans.

Technical features



Capstan with foot pedal control. Capacity: 1.5 t. Speed: 25 m/min.

Horizontal capstan to pull waggons.

Capstan. Waggon pulling.

Capacity: 1.5 t. Speed: 25 m/min.

Capstan with foot pedal control.

SHOW-BUSINESS INDUSTRY

Over the years, HUCHEZ has developed and designed manual and electric winches adapted to the entertainment world. These winches are used to manipulate, position accurately and safely any kind of stage or theater equipment (sound elements, lighting, sets, chandeliers...).

MINES AND QUARRIES

Many years of experience in different industries supporting your projects

Well-known for their manufacturing quality and solid construction, HUCHEZ winches are regularly chosen to tension conveyor belts which are necessary to move materials over large distances (aggregates, minerals, etc.), to lift counterweights before working on them, or even to adjust the height of the arms of these conveyors.

BUILDING

HUCHEZ offers winches for all kinds of applications: Lifting materials on renovation sites, hoists, etc.

PUBLIC WORKS

For many years, HUCHEZ has supplied to well-known companies in public works (motorway construction, works of art, etc.) both in France and abroad.

For these construction sites, HUCHEZ is even able to offer adapted solutions using standard equipment with capacities up to several dozen of tons.

INDUSTRY

Many years of experience in different industries supporting your projects

In order to meet the highest demands of manufacturers in the aeronautical, automobile and food industries, HUCHEZ offers winches, jib cranes and gantry cranes adapted to multiple applications: Lifting or pulling loads, production lines layout, etc.

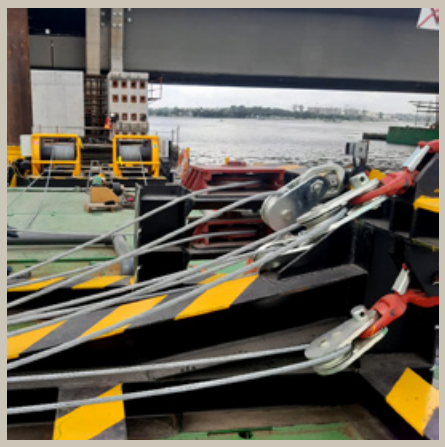
OFF-SHORE

HUCHEZ hydraulic, manual or electric winches offer a large choice of options (ATEX certification, specific surface coating protection...) meeting the requirements of the complex environments in which they are used.

MARITIME AND WATERWAY TRANSPORT, PORT SECTOR

Many years of experience in different industries supporting your projects

HUCHEZ designs and develops winches and also capstans that are used on shipbuilding sites, in port activity areas... for mooring and towing operations of barges, boats,...



ENERGY AND ENVIRONMENT SECTORS

Our winches can be found in nuclear or electric power plants, wind energy, hydroelectric dams to open and close doors or valves, lifting loads during maintenance operations.

NEW PRODUCTS

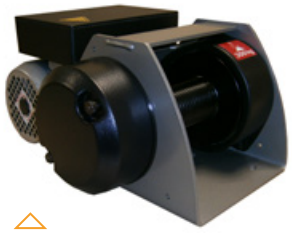
Electric winches

INDUSTRIA from 1 to 10 t.

Long drum models.
Models with FEM/ISO 3m/M6 classification.

TRAKZIO-R from 2.4 to 15 t in pulling/hauling and from 20 to 40 t holding loads.

TRAKZIO from 1.3 to 15 t in pulling/hauling.



AGON 300 kg
Motorised lifting equipment for sport and cultural facilities : Consult us.

KOLOSS from 12 to 35 t in lifting and up to 50 t in pulling/hauling.

Vehicle winches

Electric and hydraulic models from 1588 to 9072 kg.

Forest winch

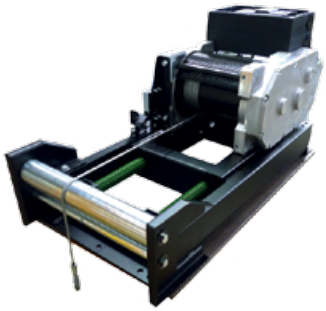
FORESTBOX from 400 to 1800 kg.

Site lifting

Mini electric winch PALANBOX
EC Certified by Huchez.
80, 160 and 230 kg.

Options and equipments

Wrist mounted radio control, wire rope kits...



Archimède

The configurator HUCHEZ

You are a distributor?

WINCHES

European directives and standards applicable to lifting equipment are as follow:

- 2006/42/EC Machine Directive.
  - On electric winches are compulsory in lifting: emergency stop and limit switch as well as a load limiter for loads of more than 1000 kg.
- The FEM 1.001 1998 standard.
- The NF EN 13157, 14492-1 and 2 standards.

Equipment delivered with EC or partly completed machine declaration of conformity and user manual.

Lifting is a load moving operation requiring, at a given time, a level change. (MD 2006/42/EC).

Pulling is a horizontal displacement operation of loads. In the event the traction stops, no load movement takes place (NF EN 14492-1:2016 Standard).

Note: Pulling on a slope is considered as lifting.

Maxi. capacity.

Stainless steel range.

Solicitation level.

Indoor, Outdoor, indoor/outdoor use.

Equipment available on ARCHIMEDE platform.

TIREX

Capacities 150 and 300 kg.
Hand spurgear winches benefiting from the qualities of composite materials and aluminum, mostly their anti-corrosion properties.

- Moderate use.
- Indoor - outdoor.
- Chassis made of an aluminum frame.
- Composite drum.
- Planetary reducer in sealed casing.
- Mounting plate in galvanised steel (standard model) or in 316L anti-corrosion stainless steel (stainless steel model).
- Flat mounted.
- 4 fixation points.
- Removable crank.
- Free spooling drum, only when not in load.
- Automatic brake in composite material.
- Failsafe system for correct rope winding direction (patented).

Options ▷ Wire rope (m/l or kit) and hook (see p. 94-98).

Strong points

△ Accessible and very safe self-tightening cable clamp.

△ Rope guide for correct winding of the wire rope.

△ Many possibilities of wire rope exits (more than 250°).

△ Reducer with satellite gears offering excellent mechanical balance and low effort on the crank.

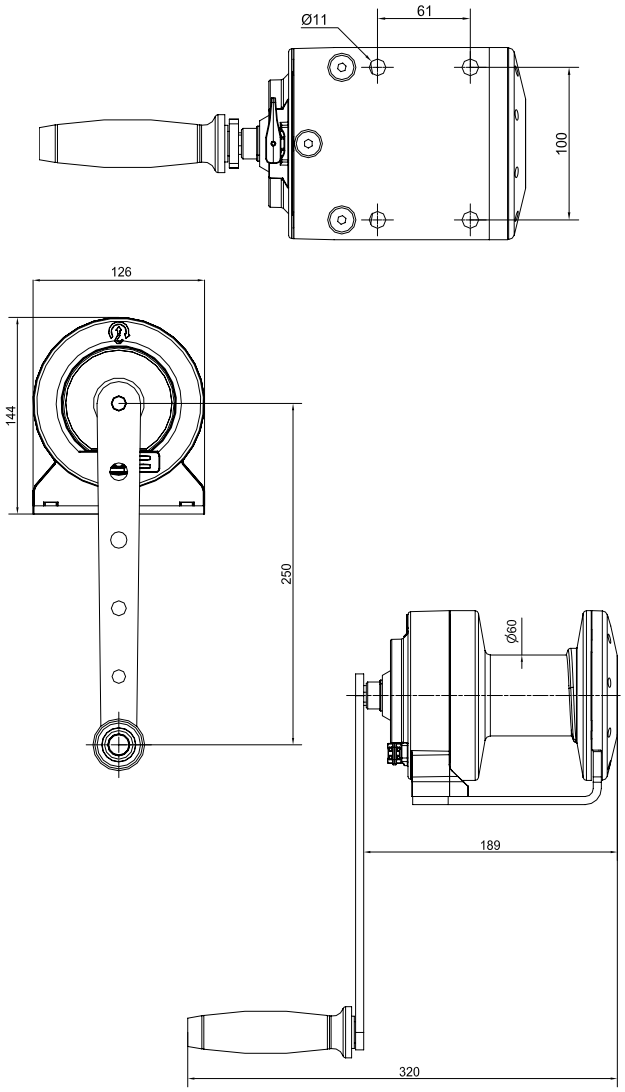
△ Maximum safety : 2 ratchets.

△ Drum release impossible when in load.

△ Removable clip-on crank with ergonomic and comfortable rotating handle.

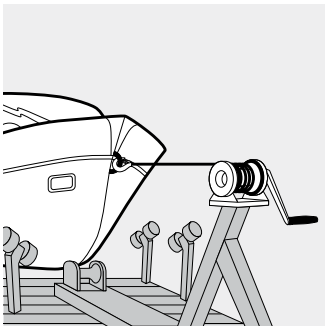
Dimensions

Dimensions in mm.

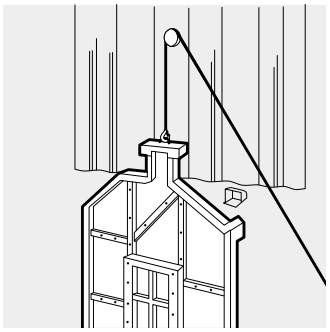


Applications

Lifting of doors, opening of hatches...



Moving a boat.



Scenery handling.

Lifting equipment from a davit crane.

Lifting equipment from a lifting table in the food industry.

Installation of a earthing mast for a SNCF cradle.

Use of the Tirex on a loading arm.

Lifting probes.

Technical characteristics

References	TIREX 150	TIREX 300
Capacity top layer kg	**150**	**300**
Capacity 1st layer kg	250	400
Nb of layers	6	3
Maxi. drum capacity m	24	8,5
1st layer drum capacity m	2.5	2
Wire rope Ø mm	4	5
Lift per crank revolution mm	40	41
Maxi. crank effort kg	8	14
Weight (without wire rope) kg	3.7	3.7

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 5 when lifting with non-rotating wire rope.

MANIBOX GR

Capacities from 300 to 2750 kg. Hand spurgear winches.

- Daily use.
- Compact and rugged construction with steel frame.
- Machined parts.
- Steel or cast iron drum depending on models.
- Painted, galvanised or stainless steel frames available.
- Flat mounted or wall mounted positions for GR 300/530/500.
- 4 fixation points.
- Fully protected gear system.
- Removable crank positioned on the left hand side for the GR 300/530/500/750 and on the right hand side for the GR 1000/1450/2000/2750.
- Free spooling drum, only when not in load.
- Composite material automatic brake.
- Failsafe system for correct rope winding direction (patented).

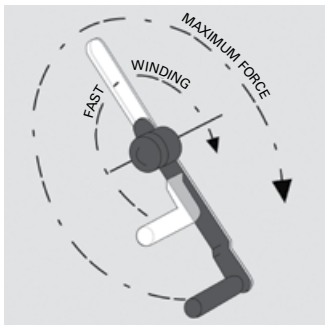
Options ▷ Wire rope (m/l or kit) and hook (see p. 94-98).

Strong points

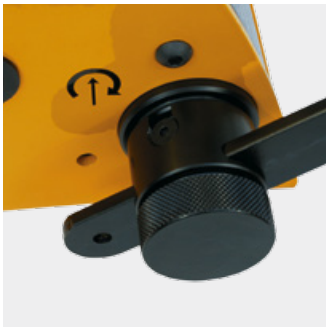
△ Highly reliable cable clamp not requiring special tool with rope winding direction guide.

△ Ratchet automatic brake with stainless steel spring.

△ Ergonomic and confortable rotating handle.



△ Removable crank. Adjustable crank handle for fast winding or on the contrary for maximum force.



△ Captive crank adjusting knob.

△ Drum release impossible when in load.

△ With stainless steel frame.

△ Crank positioned on the right hand side for GR 1000/1450/2000/2750.

631.AFL

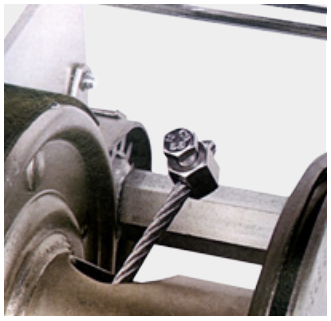
Capacities from 80 to 490 kg. Self-braked hand winches.

- Occasional use.
- Chassis in bichromated galvanized steel (standard model) or in 316L anti-corrosion stainless steel (stainless steel models, ref. «X»).
- Flat mounted. 3 fixation points.
- Fixed crank.
- Ratchet and friction automatic brake.

Options ▷ Wire rope (m/l or kit) and hook (see p. 94-98).

Strong points

- Small footprint.



△ Quick and easy installation of the wire rope. Cable clamp included.

△ Gear protection.

△ Stainless steel model.

Applications

- Short lifting applications (chandeliers...).

△ Lifting of a filter in a tank.

△ Lifting of a tank in the food industry.

H mm	200	240	240	253	312	348

PULLING HAND WINCHES

THB

Pulling capacity 4 t, up to 10 t holding. Hand gear winch.

- Daily use
- Rugged construction with steel chassis.
- Steel drum and shafts mounted on self lubricated bearings.
- Straight cut gears in high tensile steel.
- Hand wheel (on the right or the left).
- Holding ratchet. Lever-operated locking ratchet.
- Pedal brake acting directly on the hand wheel.

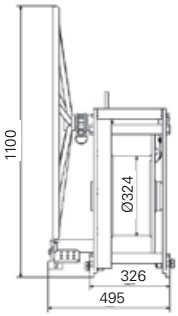
Options ▷ Wire rope (m/l) and hook (see p. 94-98).

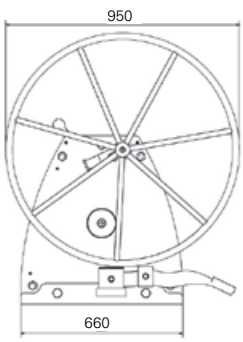
Applications

- Docking.
- Mooring of barges between them for river navigation...
- Barge hauling.

Dimensions

Dimensions in mm.





Technical characteristics

Reference	THB
Capacity top layer kg	**4 000**
Capacity 1st layer kg	5 100
Holding capacity kg	10 000
Nb of layers	4
Maxi. drum capacity m	46
1st layer drum capacity m	7.5
Wire rope Ø mm	16
Travel/hand wheel revolution mm	150
Weight (without wire rope) kg	250

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 3 when pulling with non-rotating wire rope.

PULLING HAND WINCHES
659

Pulling capacities from 600 kg to 10 t.
Pulling crab winches, gear type.

- Daily use.
- Rugged construction with steel chassis.
- Drum (steel or cast iron) and shafts mounted on self lubricated or bronze bearings.
- Straight cut gears in high tensile steel.
- 2 handles as standard.
- Two speeds. Free spooling (except for the 600 kg model).
- Manual band brake (lever or hand wheel).

Options
- Hand wheels.
- Marine Paint.
- Wire rope (m/l or kit) and hook (see p. 94-98).

Strong points

- Adjustable crank in lenght (models up to 3 t).

Models with hand wheel (option).

Applications

- Pulling vehicles, wagons...
- Door opening...
- Pulling grids on a dam.
- Operations requiring large wire rope capacities.

Pulling boats.

Mooring and moving of barges, boats...

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 3 when pulling with non-rotating wire rope.

PULLEY-MAN PORTABLE MINI WINCH

Capacity 300 kg (up to 1500 kg in traction/hauling on wheels depending on the slope)
PULLEY-MAN portable mini winch to use with all screwdrivers / drills, cordless or not.

- Occasional use.
- Machined cast iron frame.
- Automatic system to maintain the load (patented self-braking brake reducer).
- Rotating suspension hook.
- Supplied with 12 m of aviation type galvanized wire rope Ø 4.76 mm and hook.
- Wire rope length :
  - Unlimited in pulling.
  - Limited to 50 m in lifting (beyond 12 m, 10 % lifting capacity loss every 10 m sections).

Options
- Pulley.
- Wall support.
- Single case kit (case, winch)
- Complete case kit (case, winch, drill, charger, sling, shackles)
- Wire rope kit with loop (20, 30, 40 or 50 m, extra m).

Strong points

Complete case kit (option).

- Small size, light weight.
- Works in all positions.

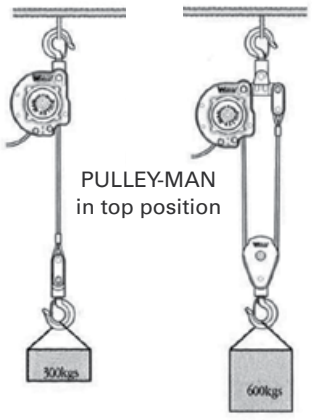
Various available options.

- Easy installation thanks to its suspension hook.

Wall support enabling the wire rope to go up or down.

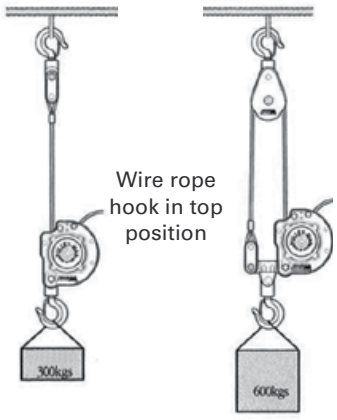
Pulley to double the load (option):
- Lifting capacity : 600 kg on 2 falls,
- Hauling capacity for load on wheels : from 200 to 3000 kg depending on the slope on 2 falls.

Fastening methods



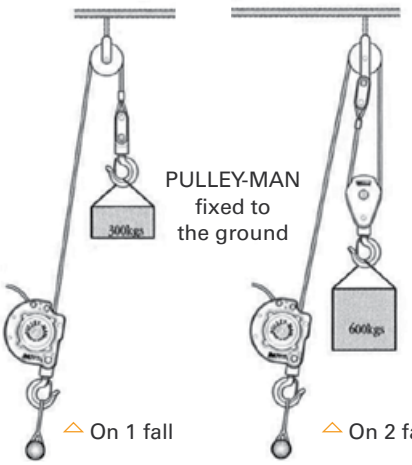
On 1 fall — On 2 falls

Winch in top



On 1 fall — On 2 falls

Winch in the bottom

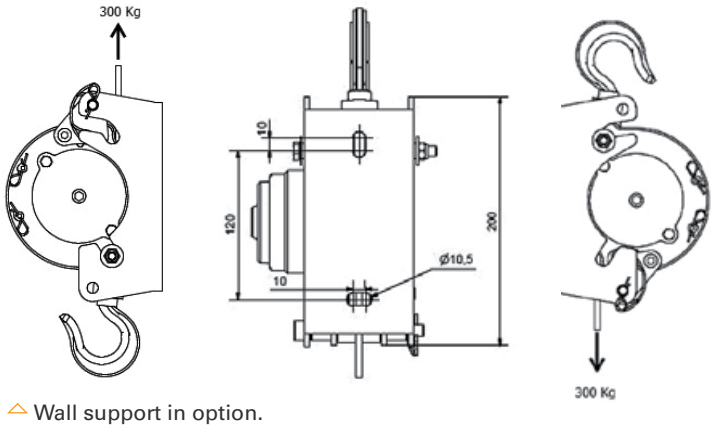


On 1 fall — On 2 falls

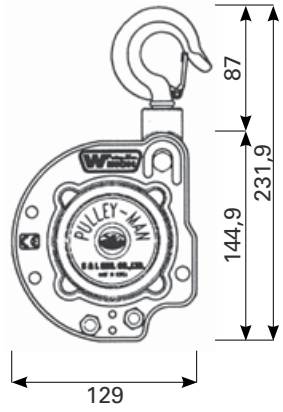
Winch in middle

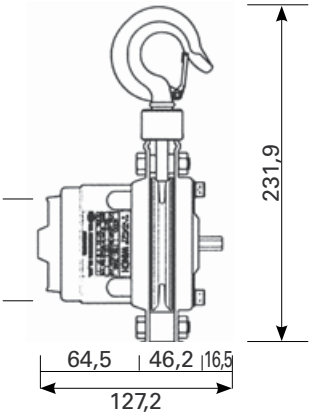
Dimensions

Dimensions in mm.



Wall support in option.

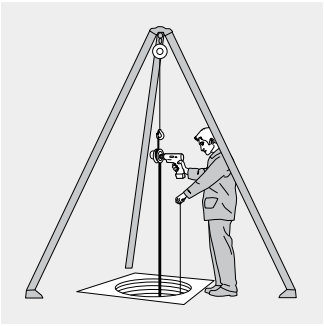




Pulley-Man

Applications

Lifting various loads (equipment...) on a construction site.



Load lifting above a well.

Heavy load handling.

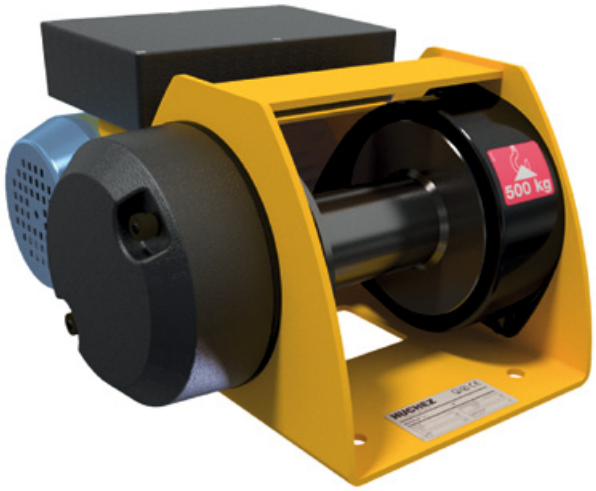
Towing a vehicle.

Light works: maintenance, repair, installation, DIY, quad, farming, first aid...

Technical characteristics

Reference	Pulley-Man
Capacity kg	**300**
Pulling capacity for load on wheels kg (with slope of 6°/12°/16°/27°/35°)	1500 / 975 / 825 / 585 / 450
Wire rope Ø mm	4.76
Weight (with 12 m wire rope and hook) kg	7.5

MOTORBOX©



Capacities from 150 to 500 kg.
Electric winches designed for simple applications, ideal for replacing a manual winch.

- FEM 1Dm - Occasional use.
- Drum and frame in mechanically welded, shot-blasted and painted steel.
- Greased reducer with helical gears.
- Asynchronous motor. Class F. IP 44 protection (model 150 kg) and IP 54 (models 300 and 500 kg).
- Automatic lack of current brake.
- Single phase power 230V-50Hz.
- Power suitable for any installation.
- Limit switches included.
- Direct control (CD) only for use protected from the weather.
- Very low voltage control (BT) ensuring user protection against electrical risks.
- 3 buttons pendant control (Up - Down- Emergency Stop), not removable (2 m long control cable).

Options Wire rope (m/l or kit) and hook (see p. 94-98).
Tarpaulin cover (see p. 98).

NEW

AGON 300 kg
Motorised lifting equipment for sport and cultural facilities : consult us.

Applications

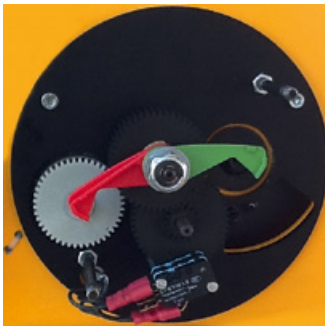
Lifting of basketball blackboard and other retractable sport equipment, room partition, billboards...

Video available on our YOUTUBE channel.

Strong points

Prevention of musculoskeletal disorders. The motorized manual winch: the ideal solution to replace your manual winch at a reasonable cost!

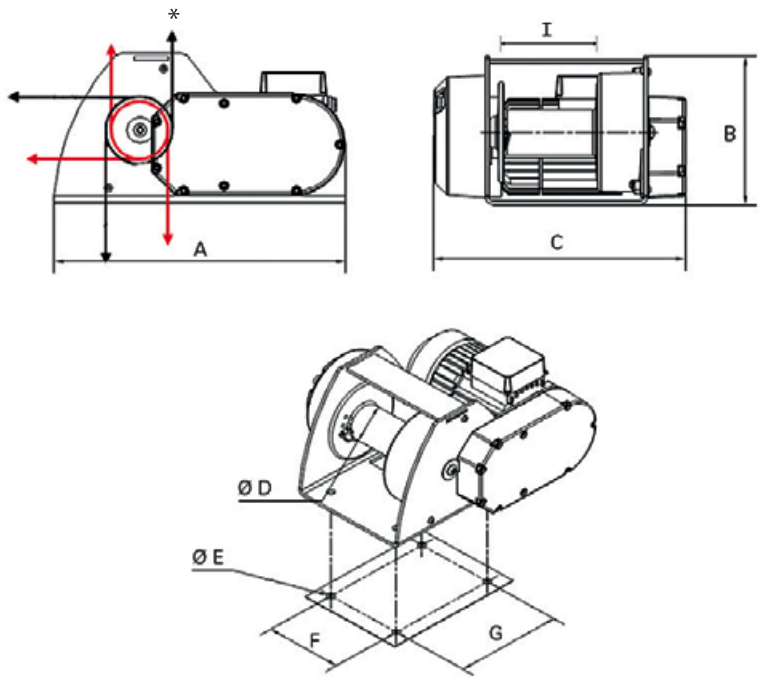
Fixations identical to the ones of the manual winches MANIBOX GR 150, 300 or 500 to facilitate replacement.



Easy to adjust and reliable limit switch specially developed by HUCHEZ.

MOTORBOX 150 : high compactness.

Dimensions



— Motorbox 150 kg (* valid only in Direct Control CD version).
— Motorbox 300/500 kg.

Weight (without wire rope) kg	14	27	27	16	29	29

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 5 when lifting with non-rotating wire rope.

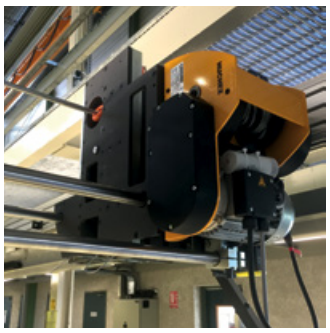
Applications

- Maintenance (chandeliers,...)
- Handling solution for billboards, rooms partitions, basketball blackboard... (AGON 300 kg: consult us.).

Opening a hatch.

Pulling a plate on a press.

Manoeuvring hatches, doors, etc.



MOTORBOX use in the industry.

PRIMO

Primo 300 kg

Capacities from 300 to 2000 kg.
Electric winches designed for simple applications, benefiting from the same quality requirements than the TRBoxter range.

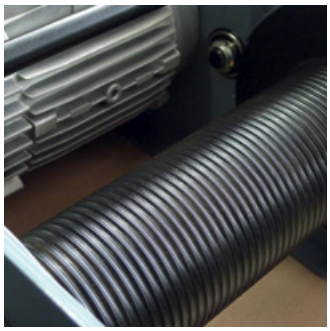
- FEM 1Cm / 1Bm - Occasional or moderate use, depending on the model.
- Drum and frame in mechanically welded, shot-blasted and painted steel.
- Greased reducer with helical gears.
- Asynchronous motor. Class F. IP 54 protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (3 Ph-230V on request) depending on model.
- Electronic load limiter (from 1000 kg) and limit switch included.
- Very low voltage control (BT) ensuring user protection against electrical risks.
- 3 buttons pendant control (Up - Down- Emergency Stop), not removable (3 m long control cable).

Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Grooved drum.
- Rope press roller.
- Tarpaulin cover (see p. 98).

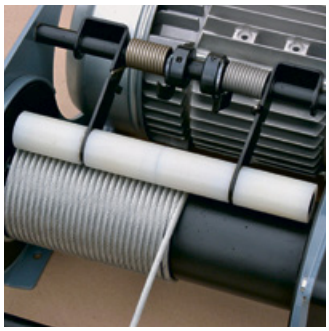
Strong points

PRIMO 2000 kg model.

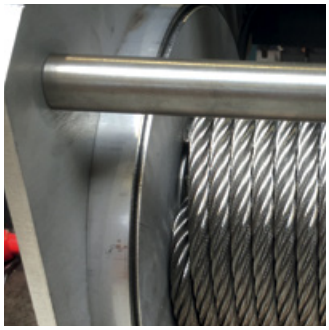
Easy to adjust and reliable limit switch specially developed by HUCHEZ.



Grooved drum (option).



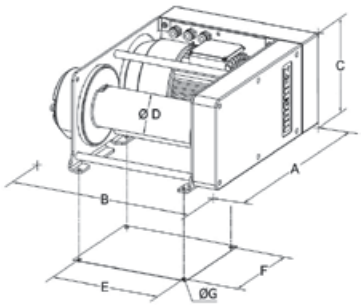
Rope press roller (option).



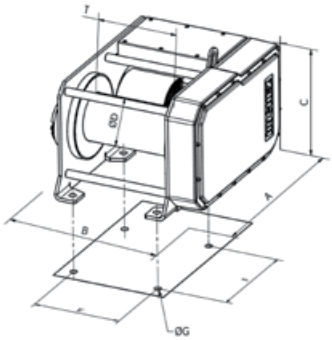
Highly reliable cable clamp not requiring special tool with rope winding direction guide.

See the following pages : Stainless steel range p.44

Dimensions



For models 300 and 500 kg.



For models 990 and 2000 kg.

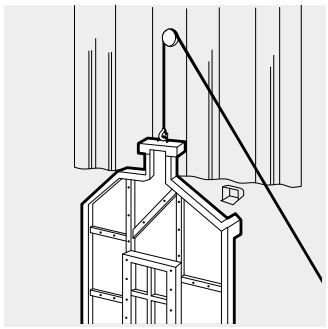
1) 2 fixation holes are available at half the dimensions, i.e. 107 mm.
Height C can vary from one model to the other depending of the type of motor terminal available: the indicated height is the maximum height.

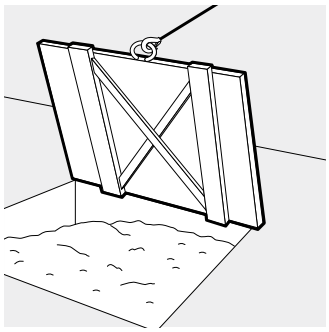
Applications

- Leisure boat hauling.
- Handling of swimming pool roofs, goods-lifts...



Handling scenery.

Pulling concrete formwork on a construction site.



Lifting hatches.

Relocation of the settling tank covers in a water treatment plant.

Lifting of a basket in a zoo.

Maintenance (chandeliers,...)...

Technical characteristics

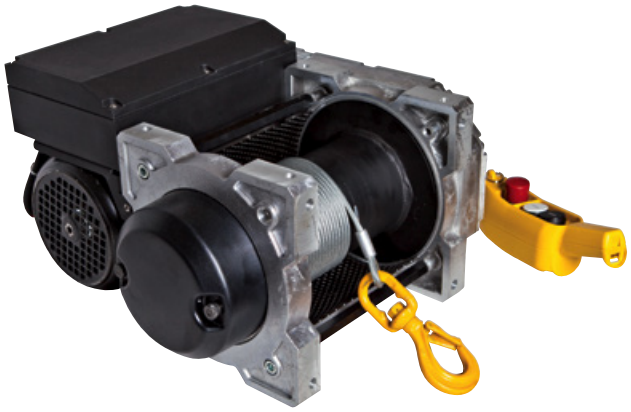
TRBOXTER



TRBoxter 500 kg, low voltage control, 1 speed model (BT).

TRBoxter 1500 kg, low voltage control, variable speed model (VV).

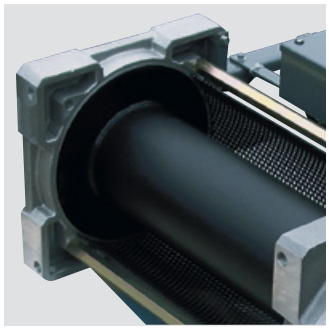
Capacities from 250 to 1500 kg. Multifunctional compact electric winches with a high duty factor.

- FEM 1Cm / 1Bm / 1Am - Occasional, moderate or accentuated use, depending on model.
- Aluminum housing.
- Mechano-welded steel drum.
- Greased reducer with helical gears.
- Asynchronous motor. IP 54 protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (other tension on request) depending on model.
- Very low voltage control (BT) ensuring user protection against electrical risks : single speed models (BT) or speed variation model (VV). In addition to the advantages of very low voltage, the VV control allows variation of the winding speed, smooth starts and stops.
- Thermal circuit breaker.
- 3 buttons pendant control (Up - Down- Emergency Stop):
  - Removable (3 m long control cable) on BT models.
  - Not removable (3 m long control cable) on VV models.

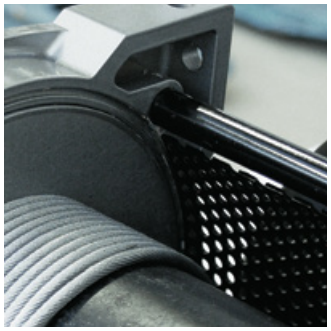
Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Limit switch.
- Rope press roller.
- Electronic load limiter.
- Grooved drum.
- Radio control.
- Other options, see p. 66-72.

Strong points

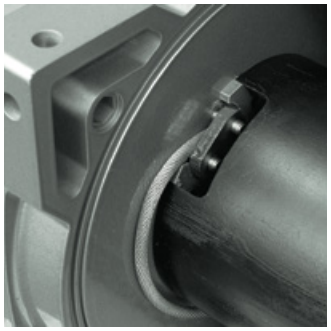
- Many fixations possibilities (on trolley see p. 54, on ceiling...).



Long drum models : T drum length and wire rope capacity x 1.5.



Drum protected by an orientable perforated metal sheet. Wide flanges for large cable capacity.

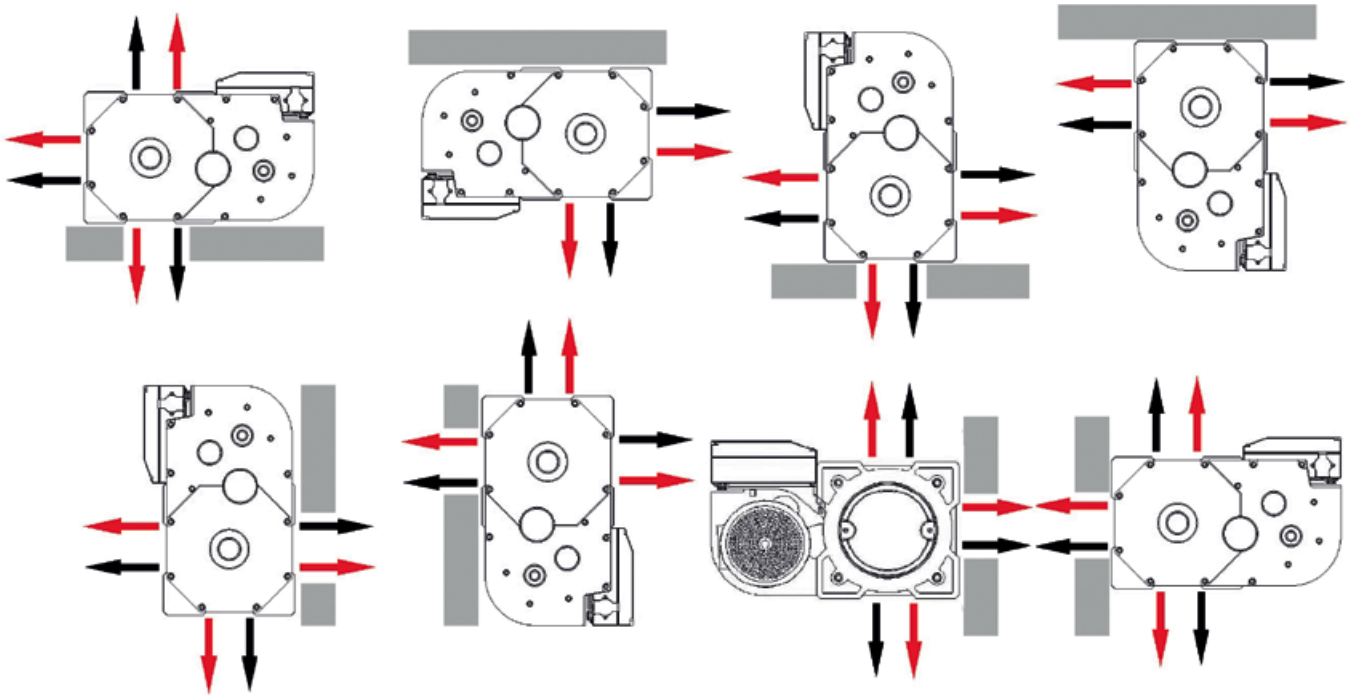


Highly reliable cable clamp not requiring special tool with rope winding direction guide. Nut cage for easy attachment.

Reliability of electric and electronic components.

See the following pages : Stainless steel range p. 46
High lifting range p. 54

Rope outlets



Standard outlet, right hand lay rope.

Non standard outlet, left hand lay rope.

Applications

- Boat hauling
- Opening of hatches, doors...
- Installation and exit of parts in furnace.

Goods lift.

On translation bracket.

Ceiling mounting.

Shows.

Chandelier handling.

Moving a trolley on a conveyor during maintenance operation.

Loading of a barge.

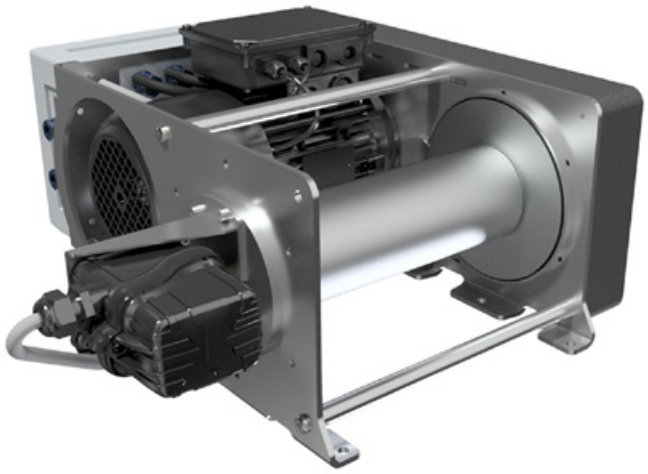
The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 5 when lifting with non-rotating wire rope.
Long drum models: drum length and wire rope capacity x 1.5.

PRIMO INOX



Capacities from 250 to 990 kg.
Electric winches designed for simple lifting or pulling applications in corrosive environment, benefiting from the same quality requirements than the TRBoxter range. Ideal for harsh environments : offshore, marine, chemical, food industries...

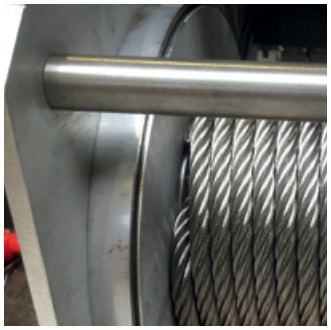
- FEM 1Bm - Moderate use.
- Chassis and drum in mechano-welded 316L stainless steel.
- Greased reducer with helical gears.
- Asynchronous motor. Class F. IP 66 protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (3 Ph-230V on request) depending on model.
- Limit switch included (IP 66).
- IP 66 control box.
- Very low voltage control (BT) ensuring user protection against electrical risks.
- 3 buttons pendant control (Up - Down- Emergency Stop), not removable (3 m long control cable). IP 66 protection.

Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Rope press roller.
- Grooved drum.
- Rope slack switch (see p. 66-72).

Strong points

Limit switches included (IP 66/67).

IP 66 control box (included).



Highly reliable cable clamp not requiring special tool with rope winding direction guide. Nut cage for easy attachment.

IP 66 Pendant Control. Marine type electric cable (without halogen). Harting type plug, IP66 protection.

Applications

Marine industry.

Food industry.

Offshore industry.

Chemical industry...

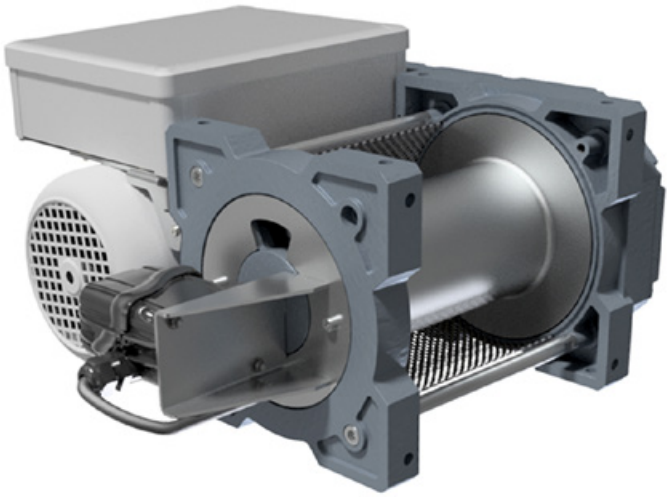
TRBOXTER INOX



Capacities from 250 to 990 kg.
Multifunctional compact electric winches designed for simple lifting or pulling applications in corrosive environment. Ideal for harsh environments : offshore, marine, chemical, food industries....

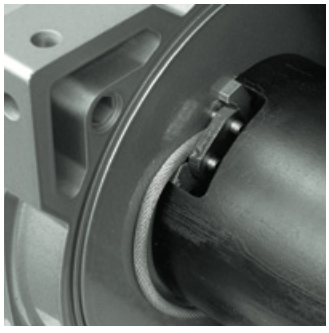
- FEM 1Bm / 1Am - Moderate to accentuated use, depending on the model.
- Aluminum housing with C4 marine paint and 316L stainless steel drum.
- Greased reducer with helical gears.
- Asynchronous motor. Class F. IP 66 protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (other tension on request) depending on model.
- Very low voltage control (BT) ensuring user protection against electrical risks.
- IP 66 control box.
- 3 buttons pendant control (Up - Down- Emergency Stop), not removable (3 m long control cable). IP 66 protection.

Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Limit switch (IP66).
- Electronic load limiter.
- Rope press roller.
- Rope slack switch.
- Grooved drum.
- Other options, see p. 66-72.

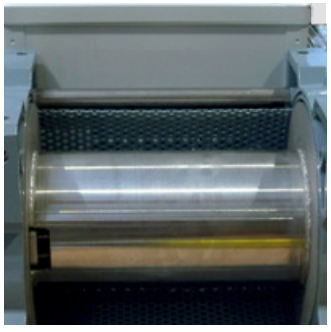
Strong points

IP 66 Pendant control. Marine type electric cable (without halogen). Harting type plug, IP66 protection.

IP 66 control box included.



Highly reliable cable clamp not requiring special tool with rope winding direction guide. Nut cage for easy attachment.



Drum protected by an orientable perforated metal sheet . Wide flanges for large cable capacity.

Applications

Marine industry.

Food industry.

Offshore industry.

Chemical industry...

Weight (without wire rope) kg	55	55	55	55	95	95	95	95

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 5 when lifting with non-rotating wire rope.
Long drums models: drum length and wire rope capacity x 1,5.

See the following pages : High lifting range p. 54

INDUSTRIA

Industria
Orthogonal model.

Capacity from 1 to 10 t.
Compact electric winches originally designed to meet the needs of the industrial sector during lifting/pulling applications. Vertical fixation possible.

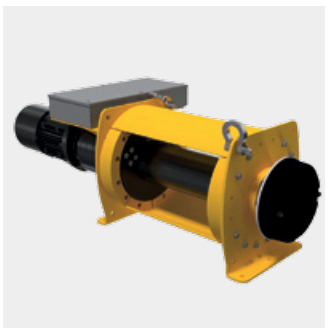
- FEM 1Am / 2m / 3m - Moderate, heavy or very heavy use according to model.
- Steel mechano-welded structure shot-blasted and painted.
- Planetary gear (reduced maintenance) in coaxial or orthogonal version.
- Asynchronous motor in horizontal position. IP 55 protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (other tension on request) depending on model.
- Very low voltage control (BT) ensuring user protection against electrical risks : single speed models (BT) or speed variation model (VV). In addition to the advantages of very low voltage, the VV control allows variation of the winding speed, smooth starts and stops.
- Thermal circuit breaker.
- 3 buttons pendant control (Up - Down- Emergency Stop):
  - Removable (3 m long control cable) on BT models.
  - Not removable (3 m long control cable) on VV models.

Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Limit switch.
- Electronic load limiter.
- Rope press roller.
- Rope slack switch.
- Bottom frame.
- Upward position for the motor.
- Radio control.
- Other options, on request (see p. 66-72).

Strong points

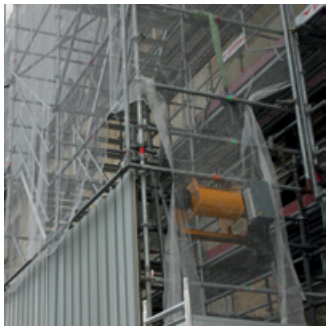
- Many fixation possibilities (on trolley see p. 54).
- Upward position for the motor.
- Wire rope anti-escape system. Safety : reduce space between the tie rod and the drum.

The tie rods can be positioned according to the wire rope exit. Many wire rope exits possible.



Coaxial model INDUSTRIA.

Applications



Manipulation of a crinoline ladder.

Lifting of conveyor arm.

Hatches lifting.

Mooring of barges between them for river navigation...

See the following pages : High lifting range p. 55

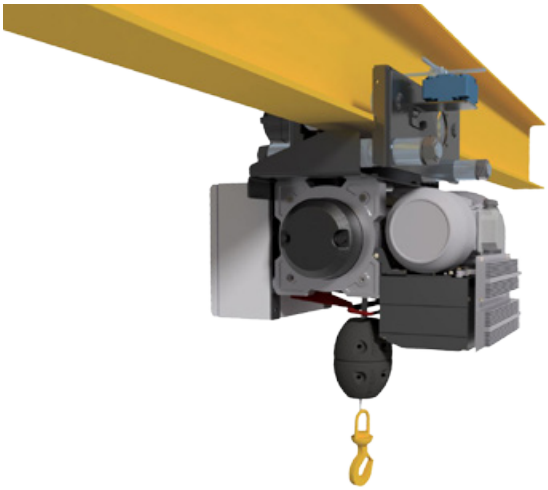
TRBOXTER



Capacity from 250 to 1500 kg.
Range of travel trolleys allowing the use of TRBoxter compact electric winches range on jib cranes or on IPE, IPN, HEB type rails...

- Push trolley or single speed electric trolley depending on model.
- 400V-50Hz three phase power.
- Upper limit switch fork and counter weight included.
- Pendant control (Lifting, Translating), removable (3 m long control cable).

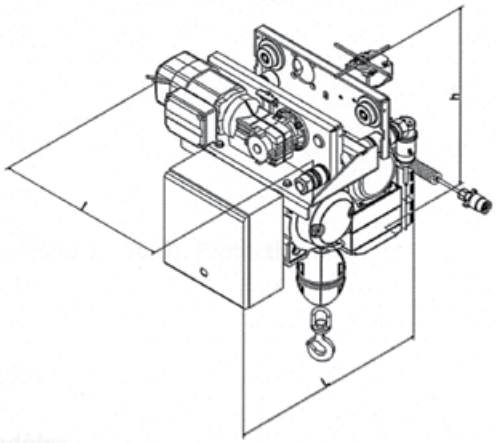
Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Travel limit switch.
- Power feeding line.

Strong points

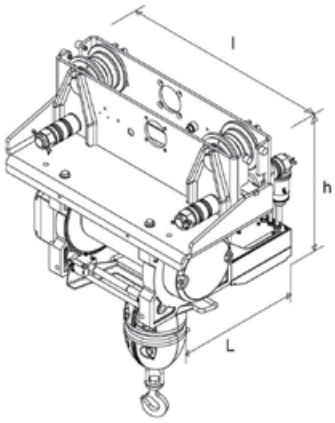
- HUCHEZ counterweight included.
- Pendant control with lifting and translating functions.

Push trolley model.

Dimensions



Electric trolley.



Push trolley.

Applications

Lifting and translating a load in a zoo.

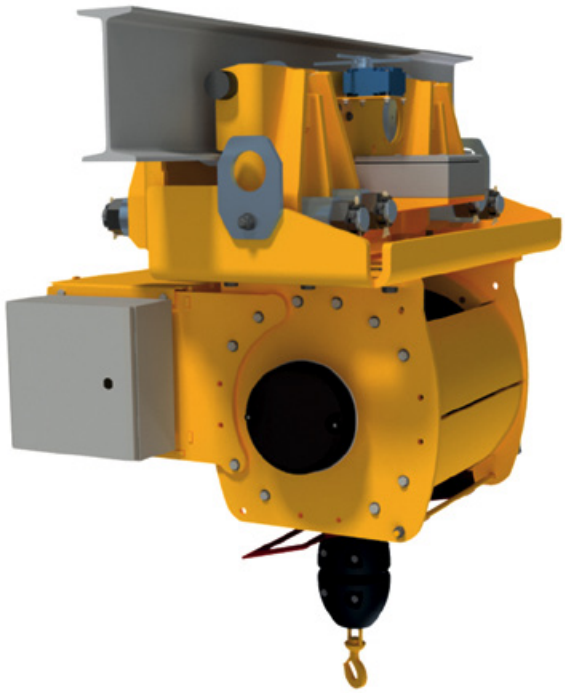
INDUSTRIA

Capacity from 2 to 5 t.
Range of travel trolleys allowing the use of INDUSTRIA electric winches range on jib cranes or on IPE, IPN, HEB type rails...

- Single speed electric trolley.
- 400V-50Hz three phase power.
- Upper limit switch fork and counterweight included.
- 5 buttons pendant control (Lifting-Translating-Emergency stop), not removable (3 m long control cable).

Options
- Wire rope (m/l or kit) and hook (see p. 94-98).
- Travel limit switch.
- Power feeding line.



Dimensions

L x l x h mm	730 x 1100 x 910	730 x 1100 x 1075

Technical characteristics

References	Chariot IND3 E	Chariot IND5 E
Capacity kg	**3 000**	**5 000**
Winch range	Industria 2-3T (standard drum, long drum on request)	Industria 4-5T (standard drum, long drum on request)
Type of trolley	Electric	Electric
Beam width mm	80-310	80-310
Trolley speed m/min	6	6
Total mass (winch included) kg	700	1 020

Strong points

- HUCHEZ counterweight included.
- Pendant control with lifting and translating functions.

Applications

Lifting and translating heavy loads.

INDUSTRIA on a trolley (coaxial model) on a gantry crane.

TE

Capacity from 600 kg to 10 t.
Electrical winches with large winding capacities, designed for lifting applications.
Vertical fixation possible.

- FEM 1 Bm / 2m - Moderate or heavy use, depending on the model.
- Steel mechano-welded structure shot-blasted and painted.
- Bronze wheel and worm gear (600, 1000 and 1600 kg models) or with bevel gear and spur gears (other models).
- Gear secondary reducer.
- Asynchronous motor in horizontal position. IP 54 Protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (other tensions on request) depending on model.
- Electric control box mounted on the winch included.
- Very low voltage control (BT) ensuring user protection against electrical risks : single speed models (BT) or speed variation models (VV). In addition to the advantages of very low voltage, the VV control allows variation of the winding speed, smooth starts and stops.
- Thermal circuit breaker.
- 3 buttons pendant control (Up - Down- Emergency Stop):
  - Removable (3 m long control cable) on BT models.
  - Not removable (3 m long control cable) on VV models.

Options
- Wire rope (m/l) and hook (see p. 94-98).
- Limit switch.
- Electronic load limiter.
- Rope press roller.
- Rope slack switch.
- Bottom frame.
- Tubular protection of the motor.
- Radio control.
- Other options, on request (see p. 66-72).

Strong points

- Many wire rope exits possible.

The modular design of the TE range easily allows all adaptations to your specific needs at the lowest cost.

Robustness and reliability of Huchez mechanical parts.

Safety : mechanical parts are protected.

Other drum dimensions on request.

* Up to 4 other possible drum lengths : dimensions on request

Applications

- Industry, Public works, sites requiring great lifting heights...
- Freight elevator.

Lifting load in a cement factory.

Installation of a formwork on a construction site.

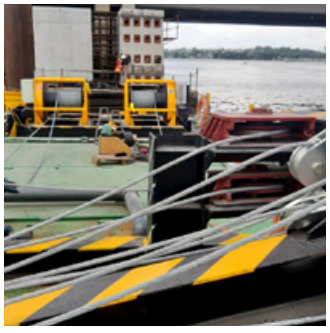
Pulling weight used to compact snow on a sky jump.

Lifting conveyor belt to load barges.

Counterweight lifting.

Load guiding.

Lifting and lowering of a grappling hook.



Skidding winches used on a building site.

Technical characteristics TE

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 5 when lifting with non-rotating wire rope.

TRAKZIO

Capacity from 1,3 to 15 t in traction.
Electrical winches with large winding capacities, designed for traction/hauling applications.
Vertical fixation possible.

- Steel mechano-welded structure shot-blasted and painted.
- Asynchronous motor. IP 54 Protection.
- Automatic lack of current brake.
- Single phase power 230V-50Hz or three phase 400V-50Hz (other tensions on request) depending on model
- Electric control box mounted on the winch and 3 dead turns detector limit switch included.
- Very low voltage control (BT) ensuring user protection against electrical risks : single speed models (BT) or speed variation models (VV) and with Dynamic Power Optimization (D.P.O).
- Thermal circuit breaker.
- 3 buttons pendant control (Wind - Unwind - Emergency Stop):
  - Removable (3 m long control cable) on BT models.
  - Not removable with potentiometer (3 m long control cable) on VV models.

Options
- Wire rope (m/l) and hook (see p. 94-98).
- Bottom frame.
- Tubular protection of the motor.
- Radio control.
- Other options, on request (see p. 66-72).

Strong points

- In addition to the advantages of very low voltage, the VV control allows variation of the winding speed, smooth starts and stops.
- The Dynamic Power Optimization (D.P.O) allows the variable speed drive to adjust the speed of the winch to the effort required : on request.

3 dead turns detector limit switch.

Manual drum release when no load, ergonomic and secure.

Applications

- Mines and quarries.
- Industry, Public Works.
- Sites requiring great lifting heights....
- Moving wagons.

TRAKZIO-R

Capacity from 2,4 to 15 t in traction.
Holding capacity from 20 to 40 t.
Electrical winches with large winding capacities.
Vertical fixation possible.

- Steel mechano-welded structure shot-blasted and painted.
- Asynchronous motor. IP 54 Protection.
- Automatic lack of current brake on the motor.
- Manual holding band brake on the drum.
- Single phase power 230V-50Hz or three phase 400V-50Hz (other tensions on request) depending on model.
- Electric control box mounted on the winch and 3 dead turns detector limit switch included.
- Very low voltage control ensuring user protection against electrical risks : single speed models (BT) or speed variation models (VV) and with Dynamic Power Optimization (D.P.O).
- Thermal circuit breaker.
- 3 buttons pendant control (Wind - Unwind - Emergency Stop):
  - Removable (3 m long control cable) on BT models.
  - Not removable (3 m long control cable) on VV models.

Options
- Wire rope (m/l) and hook (see p. 94-98).
- Bottom frame.
- Tubular protection of the motor.
- Radio control.
- Other options, on request (see p. 66-72).

Strong points

- In addition to the advantages of very low voltage, the VV control allows variation of the winding speed, smooth starts and stops.
- The Dynamic Power Optimization (D.P.O) allows the variable speed drive to adjust the speed of the winch to the effort required : on request.

3 dead turns detector limit switch.

Manual drum release when no load, ergonomic and secure. Manual holding band brake.

Applications

- Fluvial, maritime.
- Industry, Public Works.
- Sites requiring great lifting heights....

Mooring of barges between them for river navigation...

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 3 when pulling with wire rope.

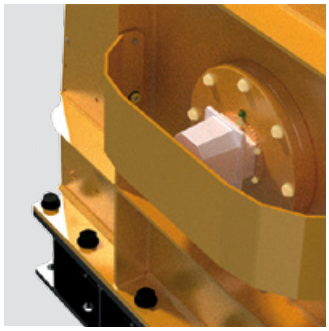
KOLOSS

Capacity from 12 to 35 t in lifting and up to 50 t in traction/hauling.
Electrical winches with large winding capacities, designed for lifting and pulling applications of heavy loads.

- FEM 1Bm - Heavy use.
- IP 55 protection.
- Steel mechano-welded chassis shot-blasted and painted.
- Asynchronous motor. IP 55 protection.
- Automatic lack of current brake.
- Three phase 400V-50Hz power.
- Bottom frame, electrical box and braking resistors mounted on the winch. Electronic load limiter included.
- Very low voltage control (VV) ensuring user protection against electrical risks. In addition to the advantages of very low voltage, the VV control allows variation of the winding speed, smooth starts and stops.
- 3 buttons pendant control (Up - Down- Emergency Stop) not removable with potentiometer (10 m long control cable). Located in a sealed protective box fixed to the control box.

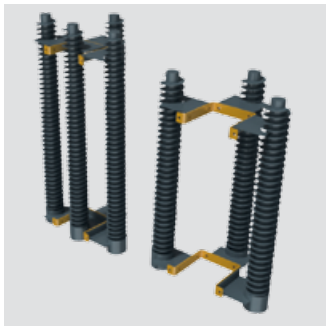
Strong points

- Many wire rope exits possible.
- Robustness and reliability of Huchez mechanical parts.



IP 55 limit switch protected by a removable plate (option).

Drum protection grids (option).



Braking resistors mounted on a support to be fixed onto a wall (option).

Pressure type press roller (option).

Options
- Wire rope (m/l) and hook (see p. 94-98).
- IP 55 limit switch.
- Limit switch protection.
- 10 m remotely located control box. Braking resistors mounted on a support to be fixed onto a wall.
- Rope press roller.
- Anti-friction rollers for the wire rope (horizontal, vertical).
- Rope slack switch.
- Galvanised skid.
- IP65/66 finish.
- C4 type marine paint.
- Radio control.
- Other options, on request (see p. 66-72).

Applications

- Lifting and pulling of very heavy loads.
- Industry, Public Works.

Cofferdam lifting winch.

Use on a shipyard.

Dimensions

Weight: on request.

The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 5 when lifting with non-rotating wire rope.

EQUIPEMENT IN OPTIONS

TO KNOW

Lifting is a load moving operation requiring, at a given time, a level change. (MD 2006/42/EC).

Pulling is a horizontal displacement operation of loads. In the event the traction stops, no load movement takes place. (NF EN 14492-1:2016 Standard).

Note: Pulling on a slope is considered as lifting.

European directives and **standards** applicable to lifting and handling equipment are as follow:

- The Machine Directive 2006/42/EC.
- The FEM 1.001 1998 Standard.
- The standards from serie 13000.
- The NF EN 14492-1 and 2 standards.

Check out

NEW

Trestles for TRBoxter 300 and 500 kg winches

Ideal for work on terrace, on stories or on the ground...

Dismountable in 8 elements, these trestles are easy to install on work sites.

Galvanised finish.

To use with counterweight made of 32 steel weights of 25 kg each.

Specific TRBoxter winches on trolley.

ON REQUEST

Chassis options

NEW

Dynamometric chassis for TRBoxter winch

Real time load display and built-in load limiter.

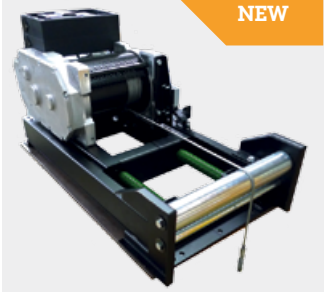
Site chassis for high capacity winches

Ground fixation for easier installation and manipulation.

Specific chassis for telescopic trolley

Easy handling thanks to the slots for the forks.

NEW

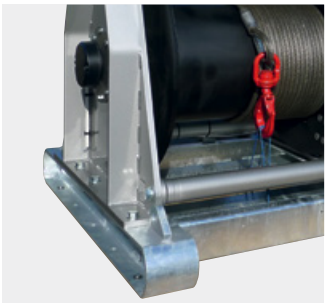


Load limitation chassis

A fixed and a mobile chassis detecting the load. The setting is more precise that the « classic » load limiter.

Chassis for TRBoxter winches

This tubular protection frame is specially designed for construction sites and public works. It has a document holder and a standard site electric socket. Fixation and ballasting thanks to the sleeves in the lower part.



Skid

Specially designed for construction sites and public works. Galvanised finish. Fixation on the ground or by slinging.

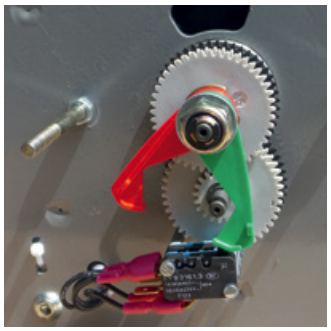
	In lifting situation	In pulling situation
Dynamometric chassis for TRBoxter winch	Optional	Optional
Load limitation chassis	Optional	Optional
Specific chassis for telescopic trolley	Optional	Optional
Site chassis for high capacity winches	Optional	Optional
Chassis for TRBoxter winches	Optional	Optional
Skid	Optional	Optional

Security options

TO KNOW

According to Machine Directive MD 2006/42/EC, are mandatory on electric winches:

- The emergency stop,
- The limit switch (in lifting),
- The load limiter (from 1 t).



Limit switch

Clock type: specially designed by Huchez with 2 positions. This easy to adjust system provides security by preventing upper and lower overruns.

Limit switch

Cam type: 2, 4, 6 or 8 positions possible. IP 66. Encoder option also possible.

Fitted pulley

The pulley with effort detection electrically cuts the winch as soon as there is an overload. (Up to 25% above the nominal load). The devise acts as a simple switch. (see p. 101).

Centrifugal brake

It controls the lowering speed in case of failure of the motor or the automatic brake.

Secondary security brake

This option increases the safety lifting level. It is mandatory in applications related to stage equipment, people lifting and load lifting above people (here with a cam type limit switch).

Rope slack switch

This devise automatically stops the winch when unwinding if the wire rope is not tensioned. For example: when lowering and the loads meets an obstacle or in traction.

Electronic load limiter

This devise stops the winch in case of overload without breaking the kinematic chain. It is mandatory in lifting from 1000 kg (Directive 2006/42/EC) to avoid cable breakage, structure deformation and therefore accidents resulting from problems due to overloads.

	In lifting application	In pulling application
Limit switch	Mandatory	Optional
Fitted pulley	Possible up to 1.5 t.	Recommended (possible up to 1.5 t).
Centrifugal brake	Optional (only available for the INDUSTRIA range).	-
Secondary security brake	Compulsory for stage equipment D8+C1.	-
Rope slack switch	Optional	Optional
Electronic load limiter	Mandatory from 1 t.	As per NF EN 14492-1: 2016 standard, compulsory in some case : check with us

OPTIONAL EQUIPMENT

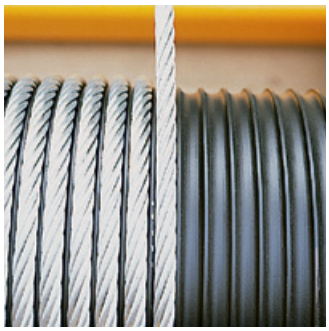
Cable winding options

TO KNOW

Winding cable must always be carried out under tension (in lifting: counterweights are mandatory see p. 102).

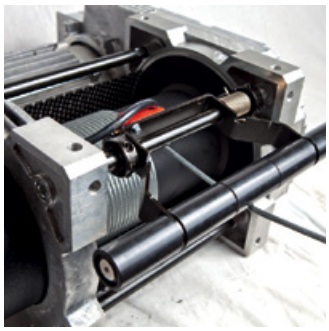
Rope press roller

Allows an orderly winding of the rope on the drum. Essential complement to the grooved drum used on a single layer and in the case where the rope is not permanently tensioned (no load winding in traction). Not recommended if the rope is wound on several layers. Mandatory with a two-way system.



Grooved drum

It facilitates the correct winding of the rope on the first layer. Essential for installing a two-way system.
See “Winding the cable around the drum” p. 104-107.



Rope slack switch

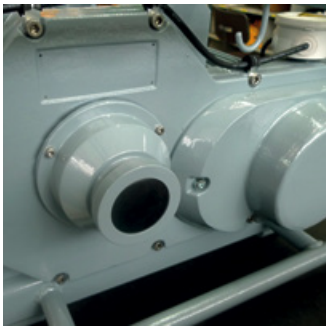
This devise automatically stops the winch when unwinding when the wire rope is not tensioned. For example: when lowering and the loads meets an obstacle or in traction.

Multi cables drum

Allows lifting a load with several ropes, lifting several loads, or making a two-way system.

Drum with additional flange

Allows several layers to be wound with 2 ropes.



Releasable drum

Very useful for manual unwinding of the rope over a long distance (pulling applications only).

Drum length on request

Rocking winch

System allowing an efficient winding of the rope around the drum of the TRBoxter winches (lifting applications only).

Counterweight

Used to maintain a minimum tension in the rope during its use.

Encoders

Encoder offering multiple possibilities (synchronization, altimetry measurement ...).

	In lifting application	In pulling application
Rope press roller	Optional	Essential to prevent the loosening of the rope on the drum.
Grooved drum	Optional	Optional
Rope slack switch	Optional	Optional
Multi cable drum	Optional	Optional
Drum with additional flange	Optional	Optional
Releasable drum	-	Optional
Drum length on request	Optional	Optional
Rocking winch	Optional	-
Counterweights	Mandatory to wind under tension.	-
Encoders	Optional	Optional

OPTIONAL EQUIPMENT

Control options

Wrist mounted radio control

PLd safety level. Range 50 to 100 m. IP 65. Li-Po (3.7 V) battery. Frequency 868 MHz or 433 MHz. – Keeps your hands free.

Pulling radio control

Pulling only. Range 100 m in open areas. Also available in long range versions 500 m in open areas. Frequency 2.4 GHz. IP 65.

Adjustable speed drive pulling radio control

Pulling only. Adjustable speed drive version. Range 100 m in open areas. Also available in long range versions 500 m in open areas. Frequency 2.4 GHz. IP 65.

Lifting radio control

SIL3/PLe safety level. Range 400 m in open areas. Available in adjustable speed drive version. Frequency 433 MHz. IP 65. Lithium-ion battery. Available options: data feedback on display screen, frequency 2.4 GHz...

Proportional adjustable speed drive lifting radio control

SIL3/PLe safety level. Range 400 m in open areas. IP 66. Lithium-ion battery. With proportional buttons for adjustable speed drive management and data feedback display screen.

Centralised control box

For the use of multiple winches with a single control box.

Remotely located control box

To position the control box when the winch is not accessible.

Double glass door control box

Protects buttons and controls.

Special controls

Made on request as per customer's specifications.

	In lifting application	In pulling application

Special controls	Optional	Optional

COMPLETE DATA SHEET ON huchez.com

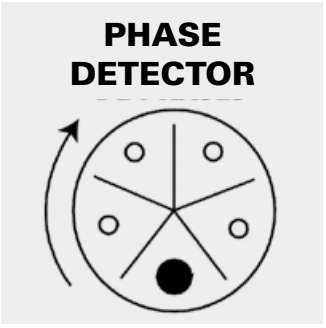
Motor options

Brake release

Allows to manually open the brake and lower the load in case of power failure.

Trouble shooting hand wheel

Coupled with the brake release, allows to lower, or precisely position a load.



Phase detector

Prevents inversion of the Up and Down when connecting the winch.

IP65 protection

Motor brake, remotely located control box, cam type limit switch.

Specific motors, specific tensions…

Made on request as per customer's specifications.

	In lifting application	In pulling application
Brake release	Optional	Optional
Trouble shooting hand wheel	Optional	-
Phase detector	Optional	Optional
IP65 protection	Optional	Optional
Specific motors, specific	Optional	Optional

OPTIONAL EQUIPMENT

Protection options

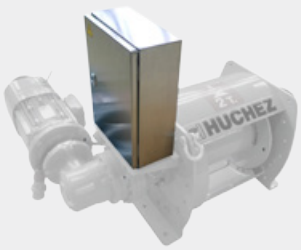
Special paint

C5M type with certificate: for use in marine/offshore sectors.
C4 type: for use in harsh environments.

Tarpaulin cover

On customer's specification only.
On request.

Rain cover



316L stainless steel control box

Recommended for use in harsh environments.

	In lifting application	In pulling application
Specific paint	Optional	Optional
Tarpaulin cover	Optional	Optional
Rain cover	Optional	Optional
316L stainless steel control box	Optional	Optional

Accessories

TO KNOW

Our winches are offered, unless stated differently, without wire rope and hook.

A choice of stainless steel, non-rotating galvanised, standard galvanised, high resistance wire ropes as well as textile ropes is available.

Once defined with our sales advisers, the wire rope can be either wound onto the drum or supplied separately.

You can also choose between smooth cable ends, equipped with a sleeved thimble loop or with a sleeved thimble loop and hook. A selection of hooks and other accessories (diverting pulleys...) is available on p. 93-102.

Wire ropes and hooks

All information on p. 93-98.

Fixed pulleys with support plates

All information on p.100.

	In lifting application	In pulling application
Wire ropes and hooks	Optional	Optional
Fixed pulleys with support plates	Optional	Optional

FORESTBOX

NOUVEAU

Pulling capacity from 400 to 1800 kg.
Lightweight portable capstan winches, for forestry professionals, fire departments, rescue operation and the construction sector.

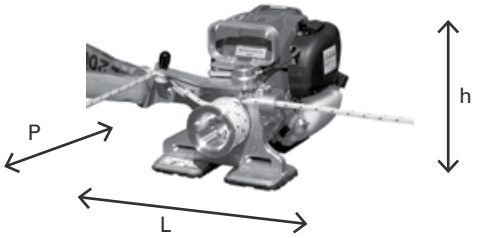
- Aluminum frame and housing with fixation ring.
- 1 speed model (up to 1200 kg) or 2 speeds (1800 kg).
- 4 stroke Honda air-cooled motor or 2 stroke Active motor depending on model.
- Illimited rope length.

Options
- Textile rope with thimble (m/l or kit) and hook.
- Sheave for doubling the capacity.
- Sling.
- Shackle.
- Soft shackle.
- Diverting pulley.
- Choker chain.
- Transport bag.

FORESTBOX 1200

Dimensions

Models	FORESTBOX 400	FORESTBOX 500	FORESTBOX 1200	FORESTBOX 1800
L x P x h mm	340 x 420 x 350	330 x 290 x 260	370 x 330 x 340	385 x 365 x 325



Technical characteristics

References	FORESTBOX 400	FORESTBOX 500	FORESTBOX 1200	FORESTBOX 1800
Capacity kg	**400**	**500**	**1 200**	**1 800**
Motor kW	3.3	1.1	3.3	3.3
Gear	1 gear	1 gear	1 gear	2 gears
Speed m/min	40	12	14	12 / 24
Textile rope Ø mm	8 to 9.5	8 to 12	8 to 9.5	12 to 14
Weight kg	12	8,5	13	14

Strong points

- Compact and light
- Safely usable from a distance by pulling on the rope.
- Centrifugal clutch: the capstan-winch continue to operate on idle which prevents unintentional rotation.
- Locking cleat brake preventing any backward movement of the load.

On the 1800 kg model, using the gear shift, the ratio between power and speed can be adjusted as the situation demands.

Many accessories in option.

Applications

- Pull heavy loads (wood...) in places that cannot be accessed by heavy machineries.
- Rescue of stuck vehicles.
- Pulling construction materials, pulling cables or pipes.

TS/TD

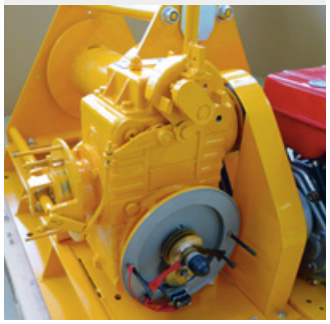
Pulling capacity from 500 to 5000 kg.
Petrol winches (TS) or diesel winches (TD) for all pulling applications on site where electric power is not or hardly available.

- Chassis and drum with large flanges in mechano-welded steel.
- Petrol or diesel motor from 4.2 to 7.6 HP depending on models.
- Disk brake.
- All controls are made by a single lever. When the operator releases the lever, the lever automatically returns to the brake position.
- Other drum sizes (300 or 900 mm) on request.

Options Wire rope (m/l or kit) and hook (see p. 94-98).
Limit switch (TS model).

Strong points

- Reduced maintenance, limited to changing the oil and lubricating the reduction gear every 500 hours of use or once a year.
- Autonomous, quick to implement.



Reducer – reverser – Brake.

Applications

- Public works.
- Construction sites...

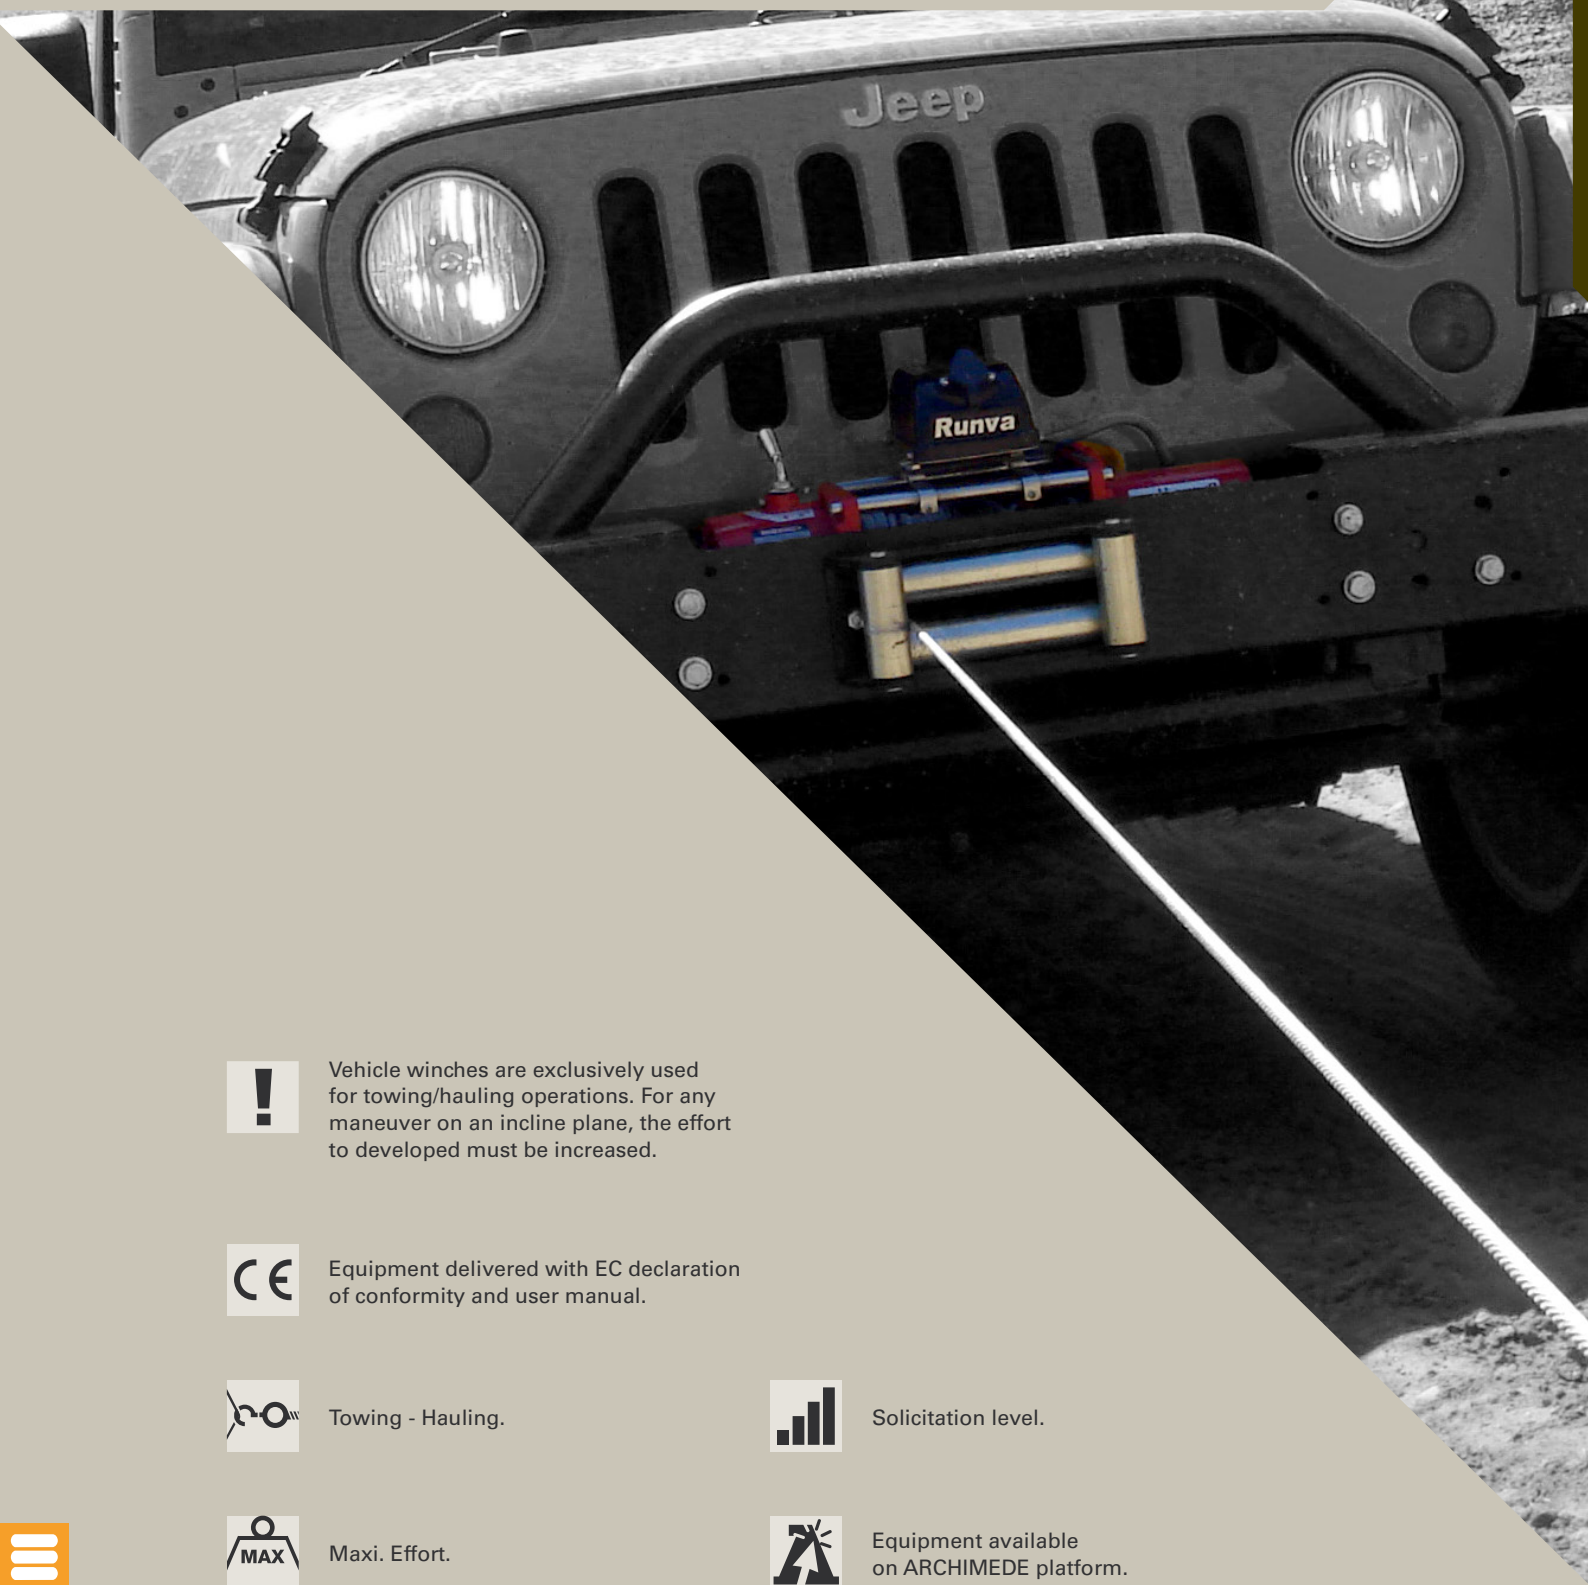
The wire rope diameter corresponds to the capacity on the top layer with a safety coefficient of (about) 3 when pulling with non-rotating wire rope.

VEHICLE WINCHES



Vehicle winches are exclusively used for towing/hauling operations. For any maneuver on an incline plane, the effort to developed must be increased.

Equipment delivered with EC declaration of conformity and user manual.

Towing - Hauling.

Solicitation level.

Maxi. Effort.

Equipment available on ARCHIMEDE platform.

EP3500/EP4500

NEW

Rated line pull 1588 and 2041 kg.
12 V electric winches for towing/hauling for ATV/UTV.

- Occasionnal use.
- Steel planetary gear.
- 12 V motor.
- Patented manual cam clutch.
- Self-block braking action.
- Roller fairlead.
- Mounting plate, rope (wire or textile) and hook included.
- 2.6 m long pendant control.

Options ▷ Sheaving pulley (see p. 99-102).
▷ Radio remote control.

Strong points

△ Nylon safety strap for safer handling of the wire rope and hook.

△ Easy freespooling.

EN17500

NEW

Rated line pull 7938 kg.
12/24 V electric winches for towing/hauling for trucks.

- Professional use.
- Planetary reducer.
- 12 or 24 V motors depending on model.
- Free spooling clutch.
- Automatic screw cone brake.
- Roller fairlead.
- Mounting plate, rope (wire or textile) and hook included.
- Compression-resisted rubber 3.9 m long pendant control.

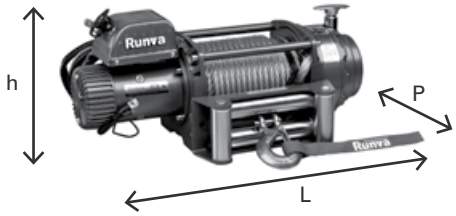
Options ▷ Sheaving pulley (see p. 99-102).
▷ Radio remote control.

Strong points

△ Nylon safety strap for safer handling of the wire rope and hook.

- Easy to install.

Dimensions



Models	EN17500
L x P x h mm	620 x 214 x 290
Drum Ø mm	89
Drum length mm	219

Applications

- Vehicle recovery.
- Trucks.
- Utility vans.

△ Big 4x4.

EB20000

NEW

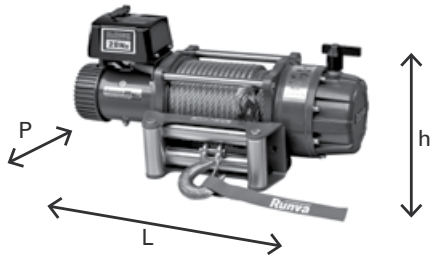
MAX 9072 KG

Rated line pull 9072 kg.
12/24 V electric winches for towing/hauling for tow trucks and other emergency vehicles.

- Professional use.
- Protection IP67.
- Steel rugged construction.
- Planetary reducer.
- 12 or 24 V motors depending on model.
- Manual clutch.
- Exclusive brake design to prevents rope wear after long-time operation.
- Roller fairlead.
- Mounting plate, rope (wire or textile) and hook included.
- Compression-resisted rubber 3.9 m long pendant control.

Options ▷ Sheaving pulley (see p. 99-102).
▷ Radio remote control.

Dimensions



Models	EB20000
L x P x h mm	626,5 x 214 x 297
Drum Ø mm	88
Drum length mm	217

Strong points

- High speed without load: 8.5 m/min.

△ Nylon safety strap for safer handling of the wire rope and hook.

Applications

- Load transfers, stowage from a vehicle or a fixed point.
- Army, civil engineering, fire fighters, civil and road protection, farmers...

△ Automobile breakdown assistance, vehicle recovery.

△ Towing (all road vehicle...).

GANTRY CRANES AND JIB CRANES

The support of the jib crane (wall or column) must be strong enough to support the efforts. Verification of the strength of the support intended to receive the bracket, depending on the horizontal and vertical reactions increased by the coefficients in force, is the responsibility of the user.

Equipment delivered with EC or partly completed machine declaration of conformity and user manual.

Lifting.

Maxi. Capacity.

Rotation angle.

IN OUT IN OUT

Indoor use, outdoor use, indoor/outdoor use.

Weights, dimensions, installation : consult us

915

Capacity from 500 kg to 5 t.
Steel gantry crane movable only with no load.

- Square tube legs and IPE profile beam.
- Robust mechanically welded construction.
- Assembly with galvanised screws.
- Rotation 360°.
- Gantry crane equipped with 4 swivel wheels on bearings.
- Glycerophtalic lacquer finish (yellow RAL 1028).

Options
- Manual push trolley.
- Manual or electric hoist (on manual push trolley only).
- Locking wheels.
- Galvanised finish.

Strong points

- Easy to set up.
- Dismantlable in 7 elements, delivered in a bundle (saving on transport cost).

Applications

- All works in a cars, trucks maintenance workshop.
- Setting up of a lifting point.

Load handling in a workshop.

Load handling in a clean room.

Outdoor works (specific make).

Load lifting on a restoration site.

STEEL WORKSHOP GANTRY CRANES
919

Capacity from 500 kg to 5 t.
Steel gantry crane movable under load, over smooth clean floors.

- Square tube legs and IPE profile beam.
- Robust mechanically welded construction.
- Assembly with galvanised fittings.
- Rotation 360°.
- Gantry crane equipped with 4 swivel wheels in white polyamide or polyurethane bandage depending on models.
- Polyurethane finish (yellow RAL 1028).
- Other spans: on request.

Options
- Manual push trolley.
- Manual or electric hoist (maximum lifting speed 16 m/min.).
- Non swivel wheels or locking wheels.
- Power feeding line.
- Lockable switch.
- Galvanised finish.
- Outdoor use.

Strong points

- Dismantlable in 3 parts.
- Easy to set up.

Applications

All works in a cars, trucks maintenance workshop.

Load lifting in a school.

917

Réf. 917
500 kg

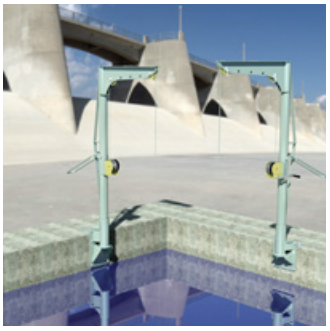
Capacity from 150 to 500 kg. Light galvanised jib cranes for wastewater treatment plants...

- Folded steel sheet column and arm, steel tube base.
- Rotation 360°.
- Galvanised finish.
- Ground fixation or wall mounted with the specific base (option).

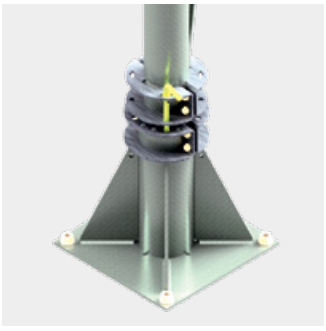
Options
- Wall mounted base.
- Anti-rotation kit.
- Hand winches (631.AFL p.28, MANIBOX GR p.24, TIREX p.22, PULLEY-MAN p.32) or electric winches (MOTORBOX BT p.34) : jib crane equipped with a winch, on request.

Strong points

- Rotation of the jib crane with retractable lever.
- Adjustment of the span with the holes in the jib crane's arm.



Wall mounted base (option).



Anti-rotation kit to block the jib crane (option).

Applications

- Wastewater treatment plants.
- Water retention basins.

Load lifting (ref. 150 kg).

Jib crane with manual winch TIREX.

Jib crane with manual winch MANIBOX and wall mounted base.

Water treatment plant.

PERSONNEL LIFTING

Equipment approved by APAVE and providing all the necessary security for lifting people.
Complies with the European Machine Directive 2006/42/EC.

Equipped delivered with EC declaration of conformity and user manual.

Lifting.

Solicitation level.

Maxi. capacity.

Indoor/outdoor use.

SECURITREUIL

Capacity 125 kg.
Equipment designed to safely lower people up to 70 m during maintenance visits in silos, bridge piers... Operation must be carried out by 2 people.

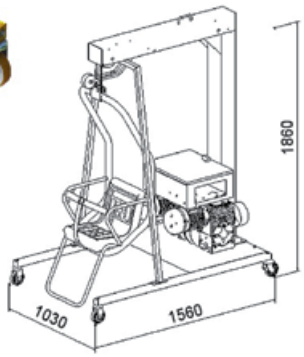
- Moderate use.
- Rigid structure in mechano-welded steel.
- Seat in mechano-welded steel tube with protective hoop, anatomical seat, safety belt and retractable footrest.
- Asynchronous motor.
- Automatic lack of current brake.
- Three phase 400V-50Hz (3 Ph-230V on request).
- Limit switches (up, down and over limits), load limiter and wire ropes (high resistance non rotating galvanised wire rope) included.
- Very low voltage control ensuring user protection against electrical risks
- Control box:
  - 2 buttons (Up -Down) not removable (2 m long control cable) for the operator monitoring the equipment.
  - 3 buttons (Up -Down -Emergency stop) not removable (25 m long control cable) with reel (ref. SCT25E CE) or with radio control (ref. SCT25RC CE, SCT50RC CE and SCT70RC CE) for the operator on the seat.

Dimensions

Dimensions in mm. Weight : 330 kg.

Passage of the seat :

- Square : 600 mm width mini.
- Circular : Ø 800 mm mini. (700 mm with another seat, on request).



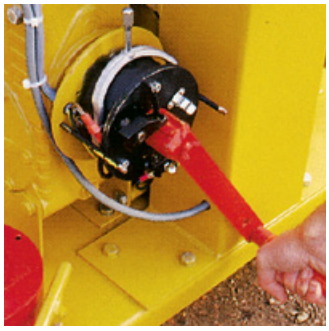
Strong points

- Lower limit switch. Automatic lack of current brake (in case of power failure, the winch automatically stops, brakes applied).
- Upper limit switch and over limit.
- Horizontal cylinders with spirit level. 4 wheels, 2 swivelling with locking mechanism enabling to move and immobilise the equipment easily.

Two independent wire ropes with a breaking load of 1600 kg each (safety coefficient equal to 10).

Two independent winches : one ensures the lifting function, the other the fall protection function. Both winches are synchronized.

Operator radio control box (ref. SCT25RC, SCT50RC et SCT70RC).



Trouble shooting crank handle and brake release.

SITE LIFTING

Equipment delivered with EC or partly completed machine declaration of conformity and user manual.

Lifting.

Maxi. capacity.

Solicitation level.

IN OUT IN OUT

Use indoor, outdoor, indoor/outdoor.

Equipment available on ARCHIMEDE platform.

CT4

Capacity from 250 to 1000 kg.
Aluminum telescopic tripods designed to be equipped with a winch (manual or electric), ideal for working on construction sites or in underground work in the absence of an upper anchor point.

- Independently adjustable aluminium legs (160 mm step).
- Cast aluminum head equipped with a removable pulley.
- Articulated feet with 2 positions to adapt to the type of ground: spade tip (loose ground) or flat shoe (smooth and fragile ground).
- Fixation plate on double leg as well as three independent textile safety straps with carabiner to control the correct spacing of the feet included.

Options
- Scalable kit (independent straps, fixing plate and offset pulley).
- Spurgear hand winch (MANIBOX GR500/1000, see p. 24-25) or electric (TRBoxter 250/350/500, see p. 38).

Strong points

△ Fixation plate to easy the installation of the winch.

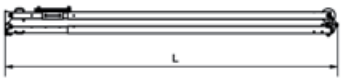
- Space-saving folded, telescopic and light.
- Their aluminum structure gives them solidity and high resistance to corrosion.

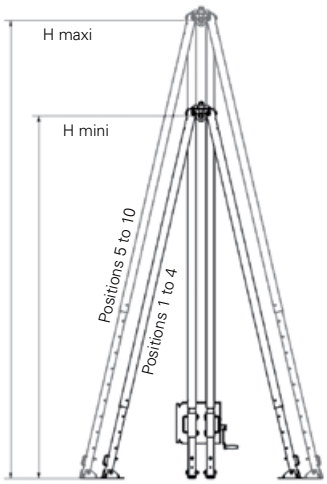
△ Easily removable pulley to avoid dismounting the feet when passing the cable before each use.

Dimensions

L = 2.78 m for 500 kg
(in 3 m height) and 1000 kg models.

L = 3.78 m for 500 kg
(in 4 m height) model.





Applications

- Road works, underground networks...

CT3

Capacity from 250 to 3000 kg.
Aluminum telescopic tripods designed to be equipped with a hoist (manual or electric), ideal for working on construction sites or in underground work in the absence of an upper anchor point.

- Independently adjustable aluminum legs (100 mm step on 250 kg model, 160 mm on models from 500 kg).
- Steel head on 250 kg model, aluminum cast on 500 and 1000 kg models.
- Articulated feet with two (models from 500 kg) or three positions (250 kg model) to adapt to the ground: Spade tip (loose ground), flat shoe (hard ground) or notched shoe (slippery ground).
- Three independent textile safety straps with carabiner to control the correct spacing of the feet (from 500 kg models) included.

Options ▷ Manual or electric chain hoist.

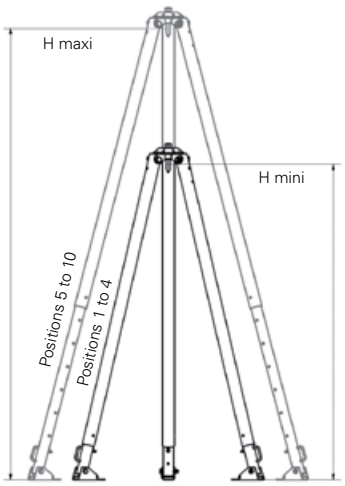
△ Ref. CT3 250 kg, flat shoe position (hoist in option).

Dimensions

L = 2.30 m for 500 kg (in 3 m height) and 1000 kg models.

L = 3.30 m for 500 kg (in 4 m height), 2000 kg and 3000 kg models.

L = 1.56 m for 250 kg model.



Strong points

- Space-saving folded, telescopic and light. Legs with handles.
- Their aluminum structure gives them solidity and high resistance to corrosion.

△ Flat shoe position (ref. CT3 500 kg).

△ Notched shoe position / spade tip position.

Applications

- Road works, underground networks...

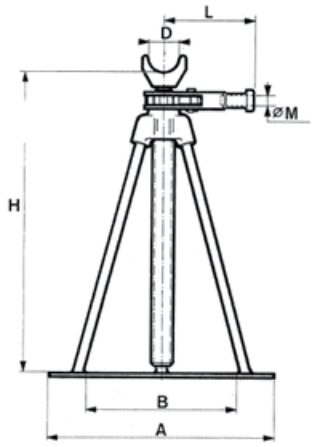
CABLE REEL JACKS
756

Dimensions



Capacity from 2 to 4 t.
Cable reel jacks used by two allowing to easily unwind reels of cable (electric or steel).

- Robust design.
- Handle with sheath for operating lever.
- Up and Down reversible retaining pawl.

Applications

- Cable companies, electricians...
- Public Works, telecoms...

Strong points

- Stable and easy to implement.
- Carrying bar necessary to lift the reels (not supplied).

797

Stainless steel model.

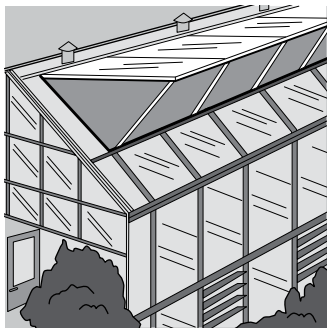
Painted model.

Strong points

- Light, irreversible.
- Small footprint.

Applications

- Sky domes, door manoeuvres...
- Short stroke manoeuvre in irrigation (small reservoirs), industry, construction, metal structures...



Handling a canopy.

Erection of a scaffolding platform.

Valve opening.

Capacities 500 and 1000 kg.
Rack jacks used for short stroke manoeuvres.

- 735 mm long rack for the stainless steel model, 1 or 2 m long rack for the 500 and 1000 kg painted models, pierced at each ends.
- Automatic load holding by worm screw.
- Fixed crank with ergonomic rotating handle.

DYNEEMA® TEXTILE ROPE

D12 SK75

Single eye hook (ref. 870).

- Ideal for pulling use.
- As resistant as steel for an equivalent diameter and 7 to 8 times lighter.
- Anti-corrosion.
- Non rotating.
- Can be handled without gloves.
- Rope sold by the meter (m/l).

Options
- Splice.
- Single eye hook recommended (ref. 870) : EN1677-2 Standard - The oversized eye allows easy mounting on cables (with thimble) (see. p. 98).
- Other diameters on request.

Technical characteristics

HIGH RESISTANCE

- Metallic central core 2160 N/mm² - 8 outer strands.
- Used for lifting or pulling loads.
- Great flexibility.
- Very high breakage load.
- Do not use to lift on a single fall for a non guided load.
- Wire rope sold by the meter (m/l).

Options
- Sleeved thimble loop.
- Single eye hook recommended (ref. 870) : EN1677-2 Standard - The oversized eye allows easy mounting on cables (with thimble) (see. p. 98).
- Other diameters on request.

GALVANISED

NEW

Single swivel hook (ref. 871)

- Metallic central core 2170 N/mm² - Right hand or left hand lay according to model.
- Used for lifting non guided loads.
- High breakage load.
- Great flexibility.
- Wire rope sold by the meter (m/l) or according to diameter, in kit (wire rope with sleeved thimble loop and single swivel hook).

Options
- Sleeved thimble loop.
- Single swivel hook recommended : EN1677-2 standard -The large bracket allows easy mounting on wire ropes (with thimble) - Hooks fitted with needle or roller bearings allowing very good rotation when on load (see p. 98).
- Other diameters on request.

PE

Pulleys with electromechanical overload detection from 100 to 1500 kg.

- Indoor-Outdoor use.
- Rigid steel frame.
- Steel sheaves on bearings.
- The pulley acts as a simple switch by detecting too high tensions in the wire rope thanks to an electrical contact (IP67).
- Initial calibration of the spring and of trigging effort set in factory.

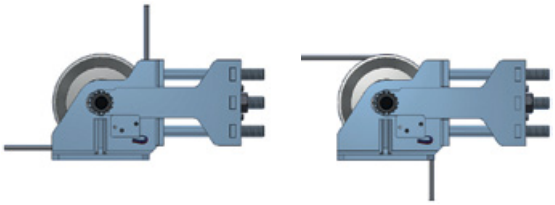
Strong points

- Easy to install.
- Electromechanical operation.

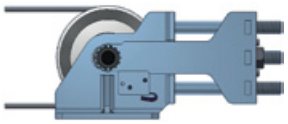
Uses

- Industry...

Wire rope outlets



△ Possible mounting from 85° to 95°



△ Possible mounting from 160° to 200°

! These angles must be respected in order to have an accuracy greater than 95%.

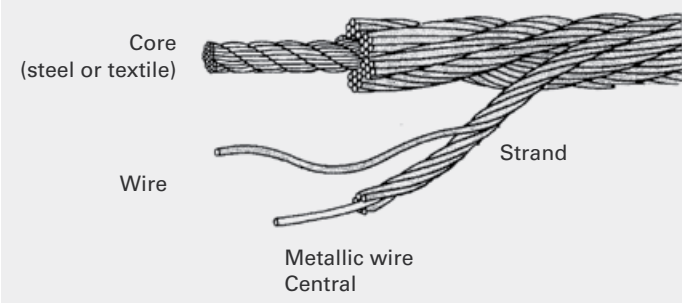
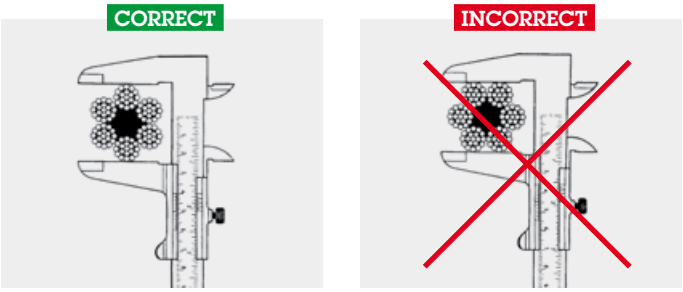
GENERAL

ROPES

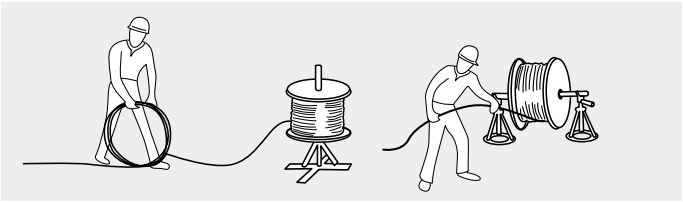


Rope diameter measurement

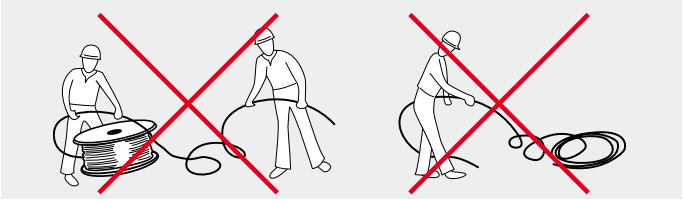
Correct measurement by means of a caliper:



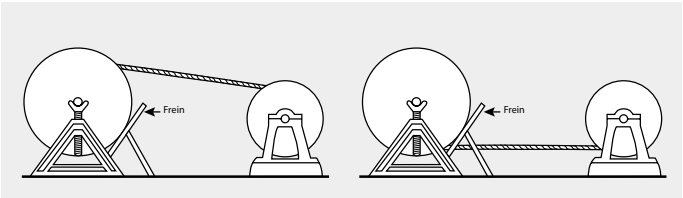
Rope handling



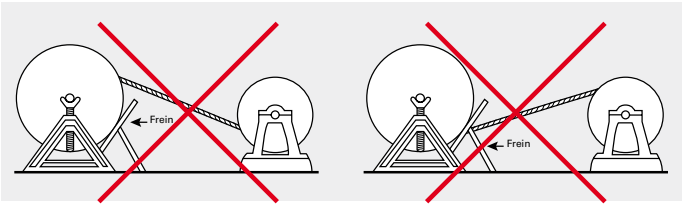
CORRECT



INCORRECT



CORRECT



INCORRECT

Choosing a wire rope

The choice of a cable can be complex because of the many parameters to examine:

- Lifting or pulling,
- Guided or free load,
- Frequency of use of the winch,
- Distance – winding length – lifting,
- Environment : indoor, outdoor, harsh,...
- Use or non-use of idler pulley and their quantity.
- Direction of wire-rope winding, grooving of the drum, etc...
- Safety coefficient wire-rope according to the application.

Our sales representatives are available for advice.

What are the main characteristics to define?

TYPE OF WIRE ROPE		
	Load in free rotation	**Guided load**
Lifting	Non rotating steel cable + swivel (hook)	▷ Standard steel rope ▷ High strength steel rope ▷ Stainless steel rope
Pulling	Non applicable	▷ DYNEEMA Textile rope ▷ High strength steel rope ▷ Standard steel rope ▷ Stainless steel rope

ROPE DIAMETER

The diameter of the wire rope is defined according to its minimum breaking load:

Minimum breaking load =
Winch capacity X safety coefficient.

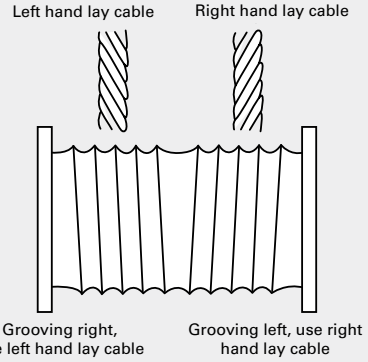
The safety coefficient is determined as follows:

	Non rotating rope	**Standard steel rope**
Lifting	The Machines Directive 2006/42 / EC imposes a (minimum) coefficient of **5**	The Machines Directive 2006/42 / EC RECOMMENDS a coefficient of **5**
Pulling	Non applicable	Without particular recommendation by the Machines Directive 2006/42 / EC Generally a coefficient of **3**

HUCHEZ winches are engineered to be equipped with ropes corresponding to these safety coefficients.

Type of rope construction: right or left

- Right winding / grooving requires a left hand lay cable.
- Left winding / grooving requires a right hand lay cable.
- A double winding drum, right and left, therefore requires 2 different cables.

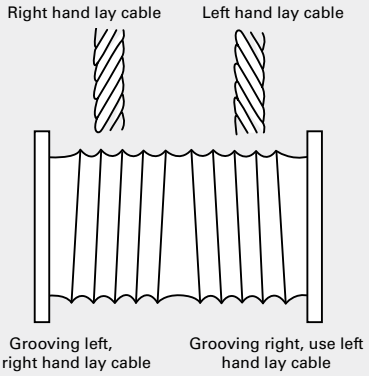


D/d Ratio – drum/rope

The D/d ratio (drum diameter / rope diameter) is a key factor in ensuring cable longevity. It depends on the mechanism classification (FEM / ISO) of the device:

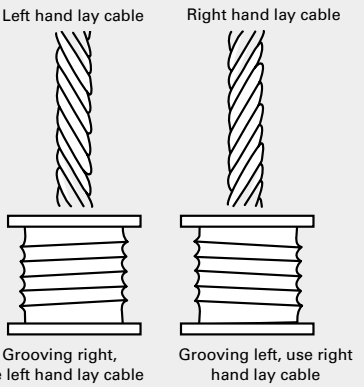
FEM/ISO	D/d ratio
M1 - 1Dm	11.2
M2 - 1Cm	12.5
M3 - 1Bm	14
M4 - 1Am	16
M5 - 2m	18
M6 - 3m	20
M7 - 4m	22.4
M8 - 5m	25

The drums of HUCHEZ winches are engineered in compliance with this rule.

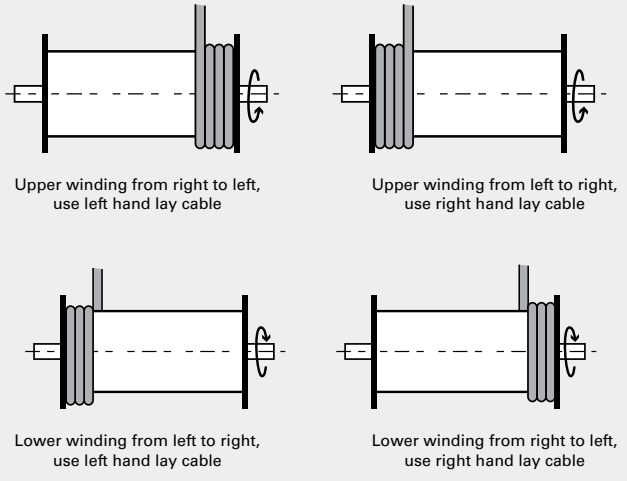


Winding the rope on the drum

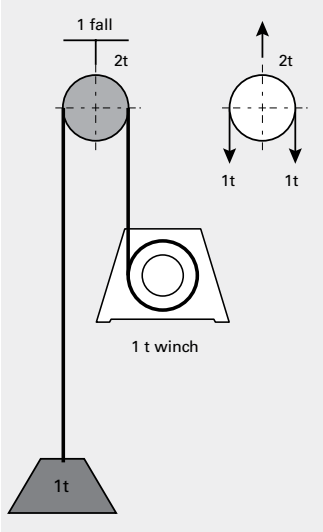
- The wire-rope must be securely attached to the drum.
- The first turn on the drum should be as close and parallel as possible with the flask drum.
- The first layer must be wound in a compact manner and under tension.
- In all cases, the layers must be all wound on the drum with sufficient pre-tension (5-10% of the SWL of the cable). If this is not the case, the cable will be subject to premature crushing and flattening caused by the top layers under load.
- A loss of pretension can be observed when it is started up. In this case, the winding procedure must be restarted at regular intervals.
- It is necessary to use the direction of the wiring (right or left) adapted to the drums.
- This applies both to smooth and grooved drums.
- Certain models have a grooved drum going two ways: one part of the grooves to the right, the other to the left. Some ropes are more sensitive to this set-up than others.
- In certain cases, it is best to use the roping direction depending on the drum layers most used (in the event of multi-layer use).
  - If the first rope layer on the drum is only used as a «guide» it will be best to use the rope direction of the second layer on the drum.

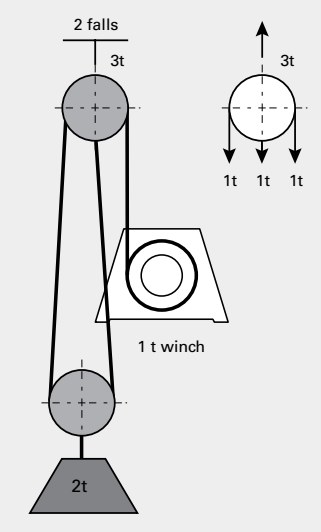


The easiest way to determine the right combination wiring / grooving is to observe the drum axis and the axis of rope: they must be in reverse.



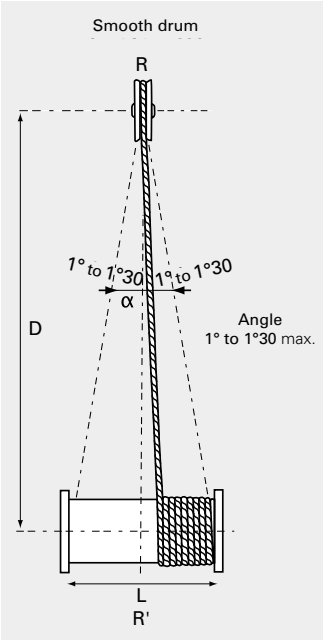
ROPES

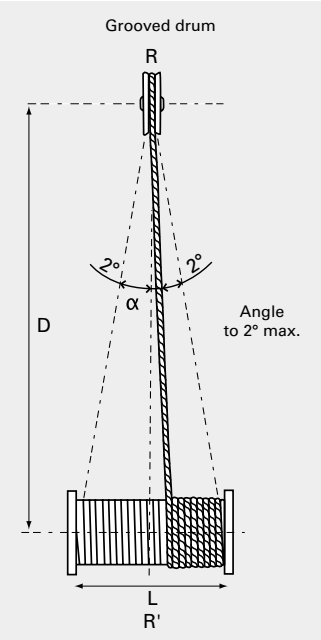




Use with pulley or pulley block

Principle of reeving.





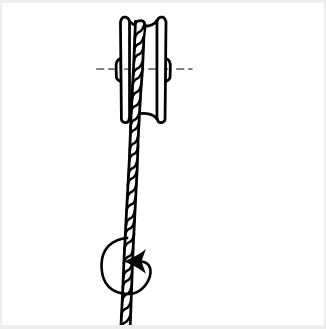
Deflection angle

α = 1.5° max on smooth drum.

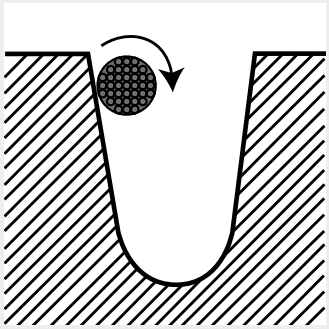
α = 2° max on grooved drum.

In practice, the minimum distance D must be: D min = 20 x L

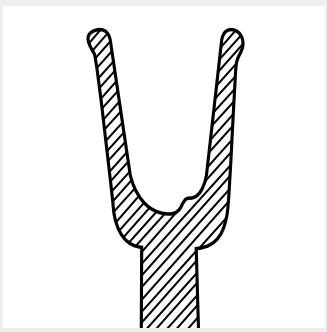
An excessive deflection angle causes:



△ Dangerous rope winding.



△ Fast wear of the groove and the rope.



△ Excessively tight winding on the drum or overlapping.

Tests made by Stuttgart University indicate the following shortening of the rope life according to the slant angle:

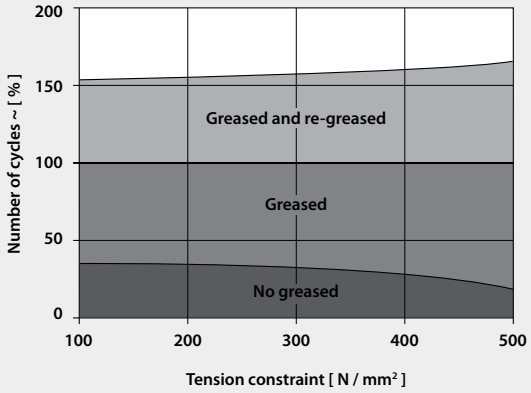
Deflection angle	Longevity factor
0°	1
1°	0.9
2°	0.75
3°	0.70
4°	0.67

Rope re-greasing

When it is manufactured, the rope receives considerable greasing that must be regularly renewed. The ropes may therefore be re-greased in view of their use, particularly along the areas subject to bending.

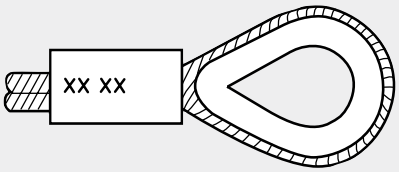
If, for operational reasons, re-greasing cannot be carried out, the rope life will be shortened and inspections must be made more frequently.

The influence of greasing and re-greasing on the life span is illustrated here:



Rope ends

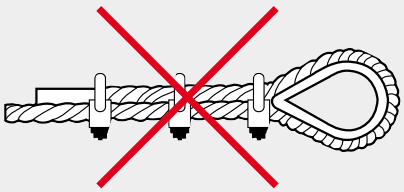
A winch's safety and correct operation largely depends on the rope end on the winch and the load. It is best to have an expert check the rope ends and the ropes themselves. The rope end illustrated bellow is one of the authorised ends for lifting. However, bear in mind that crimping also causes 10% loss of breaking load.



△ « Talurit » crimping with tag

End prohibited when lifting.

- The rope holders may in no case be used as rope endings in «lifting».



Inspections

- Daily visual inspection.
- Periodical inspections by qualified persons depending on the conditions and time of use of the apparatus, its type and its classification.
- Special inspections if the lifting apparatus is out of service for 3 months or more, or after damage to the rope or attachment points.

Examples of a few possible defects associated with the ropes (non-exhaustive list):

- "Corkscrew" deformation

- "Basket" deformation

- Strand extrusion

- External wear

LIFTING DEVISE MECHANISM CLASSIFICATION

To determine the group for your lifting device, winch or block and tackle, three essential parameters are to be taken into account:

Maximum load to be lifted

Including the weight of the cable and any lifting accessories (hook, etc.) except where these are of a total weight of 5% or less of the load to be lifted.

Load condition

- Details in what proportions the lifting device is used at maximum load or reduced load.
- For an exact classification, it is preferably to calculate the average cubic value (k) using the formula below:

$$k = \sqrt[3]{(\beta_1 + \gamma)^3 \cdot t_1 + (\beta_2 + \gamma)^3 \cdot t_2 + ... + \gamma^3 \cdot t_\Delta}$$

where: **β =** effective or partial load nominal load
γ = dead weight maximum load
t = operating time with effective or partial load + dead weight total operating time
t Δ = operating time with dead weight only total operating time

Thus a distinction is made between four characterised load conditions:

Light	Lifting devices subjected exceptionally to the maximum load and normally to very light loads.	$k \leq 0.5$
Medium	Lifting devices subjected fairly often to the maximum load and normally to light loads.	$0.5 < k \leq 0.63$
Heavy	Lifting devices subjected frequently to the maximum load and normally to medium loads.	$0.63 < k \leq 0.8$
Very heavy	Lifting devices subjected regularly to loads close to the maximum load.	$0.8 < k \leq 1$

Operating class

- This is the average operating time per day, on the basis of 250 working days a year.
- The lifting device is considered to be in operation when it is moving; conversely, it is not during stoppage times, between raising and lowering for example.

These three parameters thus provide the means for classifying the devices into groups of mechanisms in accordance with this table you can use to determine the group for the lifting device you need:

Duty factor	OPERATING CLASS (or average daily operating time in hours, on the basis of 250 working days a year)							
Light	30 mn	1 h	2 h	4 h	8 h	16 h	More than	-
Medium	15 mn	30 mn	1 h	2 h	4 h	8 h	16 h	More than
Heavy	7 mn	15 mn	30 mn	1 h	2 h	4 h	8 h	16 h
Very heavy	-	7 mn	15 mn	30 mn	1 h	2 h	4 h	8 h

Solicitation	MECHANISM CLASSIFICATION							
According to FEM rules	1Dm	1Cm	1Bm	1Am	2m	3m	4m	5m
According to ISO standard	M1	M2	M3	M4	M5	M6	M7	M8

Let us take an example of calculation to determine a mechanism group and the choice of the winch which matches:

Data:
- Maximum load to be lifted 5000 kg
- Load condition 50% of time at the nominal load (for the lifting device)
  50% of time under no load
- Operating class 4 hours a day, 250 days a year.

In view of these elements:
- The characterised load condition (k) is thus: k = 0.79 =>« heavy »
- The mechanism group determined is: 3m (FEM) / M6 (ISO)
- The choice of winch in the HUCHEZ range will be:
  - INDUSTRIA 5 t (FEM/ISO 3m/M6) see page 48
  - 7500TE see page 56

Our technical sales staff is at your disposal to help you determine the characterised load condition corresponding to your case.

TERMS OF SALES

These PROFESSIONAL GENERAL TERMS AND CONDITIONS are available for the supply of CATALOGUED HANDLING EQUIPMENT. For SPECIFIC EQUIPMENTS you have to refer to the corresponding PROFESSIONAL TERMS AND CONDITIONS.

EQUIPMENT AND THEIR FITTINGS

1 ▷ GENERAL PROVISIONS

1.1 ▷ Contract formation

Every order requires the purchaser's acceptance of these general terms and conditions. Therefore, any provisions that are contrary hereto and, particularly all general conditions that were previously transmitted by periodic circulars, shall not be enforceable against the seller unless the latter agrees thereto in writing.
A contract of sale is complete only after the seller's written acceptance of the purchaser's order. An accepted order shall not be cancelled without the seller's consent.

1.2 ▷ Specifications regarding the supply

Characteristics mentioned in catalogues, prospectuses and all other advertising materials and documents are given purely as an indication. The seller reserves the right to make any changes in its designs that it deems appropriate, even after acceptance of the orders, without, however, affecting the essential characteristics and performance.

1.3 ▷ Tests and acceptance

The costs of tests and acceptance requested by the purchaser are borne exclusively thereby.

1.4 ▷ Estimate (for repair)

The costs necessary for the issue of a repair estimate, such as the time of assembly or re-assembly, and travel expenses, are invoiced when the estimate is not followed by an order.

2 ▷ DELIVERY

The times for delivery commence to run after the sending of the acknowledgement of receipt and receipt of the instalment specified in paragraph 5. They are given purely as an indication and in total good faith.
Whatever the purpose of the equipment and terms of sale, delivery is deemed to be made in the seller's plants and stores.
Delivery is advised by a simple notice of availability. Such a notice signifies either the direct remittance of the equipment to the purchaser, delivery of the equipment in the seller's plants or stores to a shipper or carrier designated by the purchaser or, in the absence thereof, by the seller.
The purchaser must take possession of the equipment within ten days of the notice of availability. If the purchaser does not take the equipment at the location and on the date that are agreed, and provided that its delay is not due to an act or omission of the seller, the purchaser must make the payments as contractually specified, with delivery deemed to have been made. In such event, the seller handles the storage at the purchaser's risk and peril, insofar as the equipment has not been individualized.
In no event shall an exceeding of the specified time result in cancellation of the order, in the payment of damages and interest or in the application of any penalties, unless expressly confirmed in the acknowledgement of receipt of the order.
«The equipment is delivered, along with its instruction manual », which the user shall consult before putting the equipment into service.

3 ▷ RESERVATION OF OWNERSHIP AND TRANSFER OF RISKS

3.1 ▷ The seller retains full ownership of the subject equipment until full payment of the principal price and ancillary items.

3.2 ▷ As of the date of delivery, the purchaser assumes liability for damage that this equipment might incur or cause for any reason whatsoever.

3.3 ▷ The equipment shall not be resold or transformed until full payment thereof without the seller's prior consent. However, in the case of a resale, the seller may exercise a right to follow the property and claim the amounts due directly from the end customer.

4 ▷ TRANSPORT AND INSURANCE

Any measures that the seller might take in the interest or for the account of the purchaser regarding insurance, transport, etc… do not contravene the principle of delivery in its plants or stores.
The fact of possibly including the carriage cost in the price is not regarded as departure from the principle of delivery in the seller's plants or stores.
Any transport handled by the seller itself, whether or not the costs are charged to the purchaser, is deemed to be made under a carriage contract separate from the contract of sale.
In the absence of instructions, the seller undertakes the shipment in the purchaser's best interests. The equipment is insured only at the purchaser's express request.
In all circumstances, it is up to the purchaser to effectuate all verifications, express any reservations upon the arrival of the equipment, and, if necessary, initiate against the carrier the actions specified by article 103 and those that follow of the Commercial Code, within the times set by article 105.

5 ▷ PRICES, TERMS AND DELAY OF PAYMENT

Unless otherwise stipulated, the payments are made at the domicile of the seller's business, net and without discount, and are due under the following terms:
1/3 by cheque upon placement of the order (instalment)
1/3 by cheque upon delivery
the balance by accepted draft, payable from the date of delivery within the customary time of 30 days, whether for products and/or services.
Any provision or request meant to specify or obtain a time of payment that exceeds 30 days, which time limit is customary in the mechanical engineering industries, may be deemed to be abusive pursuant to article L. 442 6 7° of the Commercial Code, unless the customer provides a sound reason.
The invoice indicates the date on which the payment must be made. All amounts that are paid prior to delivery are deemed to be installments, and thus do not give the purchaser any right to cancel the contract of sale.
Any non-payment of an installment on the agreed date and any refusal to accept a bill of exchange when presented will lead to:
on the one hand, ipso jure and without prior notification, in accordance with article L441-6 of the Commercial Code, from the very first day overdue:
- the application of late payment interest equal to the most recent refinancing rate defined by the European Central Bank increased by ten points (modernisation of the economy law - LME - No.2008-776 of 4 August 2008), without prejudice to any damages and interest which may be claimed;
- the application of a flat-rate compensation for cost recovery fees totalling 40 euros (European directive 2011/7 of 16 February 2011, law 2012-387 of 22 March 2012 and decree 2012-1115 of 2 October 2012),
- additional compensation, based on documentary proof, if the cost recovery fees indicated are greater than this flat-rate compensation rate. Furthermore, any outstanding payments would become payable immediately.
on the other hand, if the vendor deems fit:
- the suspension or cancellation of all orders in progress,
- the cancellation, ipso jure, of the sales contract one month after the official demand, sent to the purchaser by registered letter with acknowledgement of receipt, to comply with their legal obligations. In this case, and without prejudice to any damages and interest which may be claimed, the purchaser must, in addition to their obligation to return the goods, pay the vendor a termination fee set at 20% of the price as evaluated at the date of termination. This fee will be charged to the payments already received.

6 ▷ WARRANTY

6.1 ▷ Scope of warranty

The seller commits that it will remedy any operating deficiencies due to a defect in the design, materials or performance (including assembly if it is responsible for this operation), within the limits of the provisions set forth hereinafter.
The warranty does not cover normal wear and tear, breakdowns due to a lack of maintenance or supervision, poor assembly or electrical connection, or, generally, to any manipulation or use failing to comply with the manufacturer's written instructions (including the normal requirements of use in the operating instructions) or to an event of force majeure. It does not apply to paint and surface coatings.
The warranty immediately ceases if the validity of the declaration of conformity expires because the purchaser used spare parts other than the original ones, or performed repair or modification work without the seller's written agreement.
In the event of use of the equipment outside of metropolitan France, the seller may change the scope and terms of warranty defined in these general terms and conditions.
Unless otherwise stipulated, no warranty applies to used equipment; alienation of the equipment by the first user terminates the warranty.

6.2 ▷ The purchaser's obligations

In order to have the benefit of this warranty, the purchaser must immediately advise the seller in writing of any defects that it observes in the equipment and provide all proofs regarding the reality of said defects; it must facilitate the observation and correction of these defects.

6.3 ▷ Effective date and duration

The standard warranty is for a period of one year unless otherwise specified in the operating manual for the product concerned. It commences on the date of delivery as specified in paragraph 2, and terminates either at the period of one year or at the end of the specified duration of use, whichever occurs first.
If the conditions for using the equipment specify a labour regime that requires more than one work station of 8 hours, the duration of warranty may be reduced.
If the effective date of warranty is deferred, the warranty period may be extended for a period equal to the period of delay. However, if such delay is beyond the seller's control, the extenstion shall not exceed 3 months.

6.4 ▷ Modes of exercising the warranty

During the period of warranty, the seller has the duty to replace the parts that are deemed to be defective after examination by its technical service or, if it so prefers, to repair them free of charge. The warranty excludes any other services or indemnification.
Repairs under the warranty are generally made in the seller's workshops, with the purchaser responsible for sending the equipment to be repaired and the defective parts thereto at the purchaser's expense.
When work on the equipment is performed outside of its workshops, the travel and accommodation expenses incurred by the seller for its agents are billed to the purchaser. However, the labour costs related to the disassembly or re-assembly of these parts are incurred by the seller when these operations are carried out by its employees or agents.
The replaced parts become the seller's property and must be returned thereto at the purchaser's expense.
Replacement parts are supplied free of charge ex-factory of the seller. Reshipment of repaired equipment is at the purchaser's expense.
Replacement parts and repaired parts are warranted under the same terms and conditions as those for new parts and for the same length of time. For the other components, servicing under warranty has the effect of extending the warranty by the length of time during which the equipment is tied up.
For items of a particular relative importance that are not manufactured by the seller itself and which carry the brand of specialized manufacturers, the warranty that may vary according to the manufacturer is that which is provided thereby.

7 ▷ DISPUTES

In the event of dispute regarding a supply or its payment, the Commercial Court of Beauvais has sole jurisdiction whatever the terms and conditions of sale and the term of payment, even in the event of an action against a guarantor or a multiplicity of defendants.
However, prior to or concomitantly with the initiation of any legal, administrative or arbitration proceeding, the parties shall have recourse to an expert's opinion pursuant to the regulation of the Codified Amicable Expert's Opinion (E.A.C.) available at :
CNIDECA - 15 rue Péclet – F 75015 PARIS - Tel: 01 48 28 75 75 – Fax: 01 48 28 74 34

OUR VALUES

The know-how and expertise of our teams in each of their domains (Production, Design, Sales...)

A very active innovation policy

HUCHEZ relies on its Engineering Department to design products adapted to the constantly changing needs of professionals.

The quality of our products

Our products are designed as per the Machine Directive 2006/42/EC and enforced European standards.

A company with a worldwide outlook

HUCHEZ has a capacity to adapt to the specific needs of international markets with a team dedicated to Europe, Africa, the Middle East ....

These values are supported by our staff who is committed to the development of HUCHEZ, thus putting customer satisfaction at the heart of its priorities.
